PYRAZOLE-RELATED DERIVATIVES ENDOWED WITH ANTITUMOR AND ANTIVIRAL ACTIVITIES,  
PROCEDURES FOR THEIR PREPARATION, PHARMACEUTICAL FORMULATIONS CONTAINING THEM.

FIELD OF THE INVENTION

5 This invention refers to new pyrazole-related derivatives having general formula (I)

wherein R is COOH or COOR',

and R' is a C<sub>1</sub> - C<sub>5</sub> alkyl radical

R<sup>1</sup> is I, Br, Cl, F, CF<sub>3</sub>, CN, SCN, CHO, CH=CH<sub>2</sub>, CH=CH Br, C≡C-Si (CH<sub>3</sub>)<sub>3</sub>,

CH=CH COOCH<sub>2</sub>CH<sub>3</sub>, C≡CH, CH<sub>2</sub>=CH NO<sub>2</sub>,

10 n is 0 or 1,

R<sup>2</sup> is H, CH<sub>2</sub>OH, CH<sub>2</sub>OCOPh, CH<sub>2</sub>O Si(CH<sub>3</sub>)<sub>2</sub>C(CH<sub>3</sub>)<sub>3</sub>, CH<sub>2</sub>OPO<sub>3</sub> Na<sub>2</sub>, CH<sub>2</sub>OPO[OCH<sub>2</sub>O-COC(CH<sub>3</sub>)<sub>3</sub>]<sub>2</sub>, CH<sub>2</sub>OPO[O CH<sub>2</sub> CH<sub>2</sub> SCOC(CH<sub>3</sub>)<sub>3</sub>]<sub>2</sub>,

R<sup>3</sup> and R<sup>4</sup> equal or different from each other are H, OH, CH<sub>2</sub>OCOPh, CH<sub>2</sub>O Si(CH<sub>3</sub>)<sub>2</sub>C(CH<sub>3</sub>)<sub>3</sub>,

or they form together an isopropylidene group,

15 provided that when R<sup>2</sup> = R<sup>3</sup> = R<sup>4</sup> = H n is always 1.

and with the exclusion of the compound having R=COOCH<sub>3</sub>, R<sup>1</sup>=I, n=0, R<sup>3</sup>=CH<sub>2</sub>OCOPh,

R<sup>3</sup>=R<sup>4</sup>=OCOPh

This invention refers also to pharmaceutically acceptable salts and soluble derivatives of compounds of formula (I), to processes for their preparation and to their use in pharmaceutical

20 formulations for the treatment of tumors and viral infections. with particular regard to infections carried out by human immunodeficiency viruses (HIV) and herpesviruses.

PRIOR ART

The most important goal in antitumor chemotherapy is the development of selective drugs that might be able to inhibit the multiplication of cancer cells without interfering with the growth

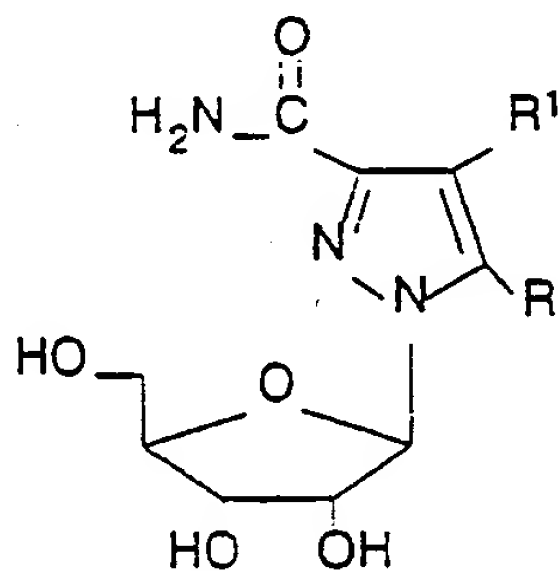

25 of normal cells.

Ribavirin (1- $\beta$ -D-ribofuranosyl-1,2,4-triazole-3-carboxamide), a drug that has been described 20 years ago as a broad-spectrum antiviral agent and which also displays antitumor activity in mice, has attracted considerable attention because of its peculiar mechanism of action, being an inhibitor of inosine monophosphate dehydrogenase (IMPDH). For this reason, a number of structural analogs of ribavirin have been developed. Among them are tiazofurin (2- $\beta$ -D-ribofuranosyl-tiazole-3-carboxamide), selenazofurin (2- $\beta$ -D-ribofuranosyl-selenazole-4-carboxamide), ribamidin (1- $\beta$ -D-ribofuranosyl-1,2,4-triazole-3-carboxamidine), FICAR (5-fluoro-1- $\beta$ -D-ribofuranosyl-imidazole-4-carboxamide) and EICAR (5-ethynyl-1- $\beta$ -D-ribofuranosyl-imidazole-4-carboxamide).

Besides their activity against a wide variety of human tumours, the above cited derivatives, and in particular ribavirin, are active against orthomyxoviruses (Influenza A and B), paramyxoviruses (parainfluenza, measles, respiratory syncytial virus), arenaviruses and bunyaviruses. They are also active against pox, picorna-, toga and reoviruses.

Ribavirin has been reported to prolonge the survival of monkeys infected with Lassa fever virus; it is used for the treatment of infections caused by respiratory syncytial virus and, so far, is the sole drug endowed with some efficacy in the treatment of viral haemorrhagic fevers in man.

Recently, Manfredini *et al.* (J. Med. Chem., 1992, 35, 917-924) have reported some 1- $\beta$ -D-ribofuranosyl-1,2-diazole-derivatives structurally related to ribavirin, of general formula (II)

wherein:

R may be H or CH<sub>3</sub> and R<sup>1</sup> may be Br, I, NO<sub>2</sub>, NH<sub>2</sub> or H.

These compounds have been shown to possess selective cytostatic activity against lymphoblastoid T cells, but their antiproliferative activity was not potent enough to be therapeutically useful.

Recent studies on the mechanism of action of ribavirin, tiazofurin and selenazofurin, which focus on the crucial role of the primary amide at C-3, have led to the conclusion that the biological activity of these drugs is related to steric and hydrogen-bonding requirements at this position. These compounds are therefore believed to be structurally related to inosine monophosphate (IMP), a prerequisite for their binding to the IMPDH [Manfredini *et al.* (J. Medical Chem., 1992, 35, 917-924) and Gabrielsen *et al.* (J. Medical Chem., 1992, 35, 3231-3238) ].

The need for new drugs that might be useful for antitumor and antiviral chemotherapy has led us to continue research in this field with the aim of discovering new active molecules.

#### 10 SUMMARY OF THE INVENTION

This invention deals with new pyrazole-related derivatives of general formula (I) carrying, as reported above, a carboxylic acid, an ester moiety or an oxadiazole at the position C3 of the pyrazole heterocycle. It also deals with their pharmaceutically acceptable salts and soluble derivatives that could be useful for the antitumor and antiviral chemotherapy.

15 In particular, the compound that will be indicated as 2 proves more active, as an antiproliferative agent, than ribavirin and as active as selenazofurin. Furthermore, when compared to selenazofurin, 2 proves less cytotoxic against resting PBL (peripheral blood lymphocytes).

In addition, the present invention refers to processes for the preparation of compounds having  
20 general formula (I) and to their use in pharmaceutical formulations useful for the antitumor chemotherapy and for the treatment of viral infections such as those caused by human immunodeficiency viruses (HIV) and herpesviruses. In fact, compounds of formula (I) were able to enhance the antiviral activity of 2',3'-dideoxy-inosine (ddI) 2',3'-dideoxy-adenosine (ddA), 9-[2-(phosphono-methoxy)ethyl]-adenine (PMEA), 9-[2-(phosphono-methoxy)propyl]-guanine (PMPG), 9-[2-(phosphono-methoxy)propyl]-adenine (PMPA),  
25 acyclovir (ACG), 9-[2-(phosphono-methoxy)-ethyl]-guanine (PMEG) and adenine-arabinoside (araA).

Therefore, the present invention also refers to the use of compounds of formula (I) with the aim of potentiating the anti-HIV activity of ddI, ddA, PMEA, PMPG, PMPA and the antiherpes  
30 activity of ACG, PMEG and araA. It also refers to pharmaceutical formulations containing the compounds of formula (I) with at least one antiviral agent such as ddI, ddA, PMPG, PMPA for

the treatment of HIV infections or in combination with antiviral agents such as ACG, PMEG and araA useful for the treatment of herpetic infections also in AIDS patients.

Another fundamental feature of this invention is that it refers to new intermediates of the above preparation processes.

## 5 DETAILED DESCRIPTION OF THE INVENTION

Based on their substituents, the compounds of the present invention having general formula (I) can be described as follows (Bz indicates the benzoyl protecting group):

- Compound 2:  $R = \text{COOCH}_3$ ,  $R^1 = \text{I}$ ,  $n = 0$ ,  $R^2 = \text{CH}_2\text{OH}$ ,  $R^3 = R^4 = \text{OH}$ ;
- Compound 3:  $R = \text{COOCH}_3$ ,  $R^1 = \text{C}\equiv\text{CSi}(\text{CH}_3)_3$ ,  $n = 0$ ,  $R^2 = \text{CH}_2\text{OBz}$ ,  $R^3 = R^4 = \text{OBz}$ ;
- 10 - Compound 5:  $R = \text{COOCH}_2\text{CH}_3$ ,  $R^1 = \text{CHO}$ ,  $n = 0$ ,  $R^2 = \text{CH}_2\text{OBz}$ ,  $R^3 = R^4 = \text{OBz}$ ;
- Compound 6:  $R = \text{COOCH}_2\text{CH}_3$ ,  $R^1 = \text{CH}(\text{OH})\text{CH}_2\text{NO}_2$ ,  $n = 0$ ,  $R^2 = \text{CH}_2\text{OBz}$ ,  $R^3 = R^4 = \text{OBz}$ ;
- Compound 7a:  $R = \text{COOCH}_2\text{CH}_3$ ,  $R^1 = \text{CH}=\text{CHCOOCH}_2\text{CH}_3$ ,  $n = 0$ ,  $R^2 = \text{CH}_2\text{OBz}$ ,  $R^3 = R^4 = \text{OBz}$ ;
- Compound 7b:  $R = \text{COOCH}_2\text{CH}_3$ ,  $R^1 = \text{CH}=\text{CH}_2$ ,  $n = 0$ ,  $R^2 = \text{CH}_2\text{OBz}$ ,  $R^3 = R^4 = \text{OBz}$ ;
- 15 - Compound 7c:  $R = \text{COOCH}_2\text{CH}_3$ ,  $R^1 = \text{CH}=\text{CHBr}$ ,  $n = 0$ ,  $R^2 = \text{CH}_2\text{OBz}$ ,  $R^3 = R^4 = \text{OBz}$ ;
- Compound 7d:  $R = \text{COOCH}_2\text{CH}_3$ ,  $R^1 = \text{CH}=\text{CHNO}_2$ ,  $n = 0$ ,  $R^2 = \text{CH}_2\text{OBz}$ ,  $R^3 = R^4 = \text{OBz}$ ;
- Compound 8:  $R = \text{COOCH}_2\text{CH}_3$ ,  $R^1 = \text{I}$ ;
- Compound 9:  $R = \text{COOCH}_2\text{CH}_3$ ,  $R^1 = \text{I}$ ,  $n = 1$ ,  $R^2 = R^3 = R^4 = \text{H}$ ;
- Compound 10:  $R = \text{COOCH}_2\text{CH}_3$ ,  $R^1 = \text{CHO}$ ,  $n = 1$ ,  $R^2 = R^3 = R^4 = \text{H}$ ;
- 20 - Compound 11:  $R = \text{COOCH}_2\text{CH}_3$ ,  $R^1 = \text{C}\equiv\text{CSi}(\text{CH}_3)_3$ ,  $n = 1$ ,  $R^2 = R^3 = R^4 = \text{H}$ ;
- Compound 12:  $R = \text{COOCH}_2\text{CH}_3$ ,  $R^1 = \text{C}\equiv\text{CH}$ ,  $n = 1$ ,  $R^2 = R^3 = R^4 = \text{H}$ ;
- Compound 13:  $R = \text{COOCH}_2\text{CH}_3$ ,  $R^1 = \text{CH}(\text{OH})\text{CH}_2\text{NO}_2$ ,  $n = 1$ ,  $R^2 = R^3 = R^4 = \text{H}$ ;
- Compound 14a:  $R = \text{COOCH}_2\text{CH}_3$ ,  $R^1 = \text{CH}=\text{CHNO}_2$ ,  $n = 1$ ,  $R^2 = R^3 = R^4 = \text{H}$ ;
- Compound 14b:  $R = \text{COOCH}_2\text{CH}_3$ ,  $R^1 = \text{CH}=\text{CHCOOCH}_2\text{CH}_3$  (E + Z),  $n = 1$ ,  $R^2 = R^3 = R^4 = \text{H}$ ;
- 25 - Compound 14c:  $R = \text{COOCH}_2\text{CH}_3$ ,  $R^1 = \text{CH}=\text{CH}_2$ ,  $n = 1$ ,  $R^2 = R^3 = R^4 = \text{H}$ ;
- Compound 14d:  $R = \text{COOCH}_2\text{CH}_3$ ,  $R^1 = \text{CH}=\text{CHBr}$  (E + Z),  $n = 1$ ,  $R^2 = R^3 = R^4 = \text{H}$ ;
- Compound 18:  $R = 3\text{'-methyl-1',2',4'-oxadiazol-5'-yl}$ ,  $R^1 = \text{I}$ ,  $n = 0$ ,  $R^2 = \text{CH}_2\text{OH}$ ,  $R^3 = R^4 = \text{OH}$ ;
- Compound 19:  $R = \text{COOH}$ ,  $R^1 = \text{I}$ ,  $n = 0$ ,  $R^2 = \text{CH}_2\text{OH}$ ,  $R^3 = R^4 = \text{OH}$ ;
- Compound 20:  $R = \text{COOCH}_3$ ,  $R^1 = \text{I}$ ,  $n = 0$ ,  $R^2 = \text{CH}_2\text{OSi}(\text{CH}_3)_2\text{-t-Bu}$ ,  $R^3 = R^4 = \text{OSi}(\text{CH}_3)_2$
- 30  $\text{C}(\text{CH}_3)_3$
- Compound 21:  $R = \text{CH}_3\text{CH}_2\text{CH}_2\text{CH}_2\text{OCO}$ ,  $R^1 = \text{I}$ ,  $n = 0$ ,  $R^2 = \text{CH}_2\text{OH}$ ,  $R^3 = R^4 = \text{OH}$ ;
- Compound 23:  $R = \text{COOCH}_3$ ,  $R^1 = \text{I}$ ,  $n = 0$ ,  $R^2 = \text{CH}_2\text{OPO}_3\text{Na}_2$ ,  $R^3 = R^4 = \text{OH}$ ;
- Compound 25:  $R = \text{COOCH}_3$ ,  $R^1 = \text{I}$ ,  $n = 0$ ,  $R^2 = \text{CH}_2\text{OPO}[\text{OCH}_2\text{OCOC}(\text{CH}_3)_3]_2$ ,  $R^3 = R^4 = \text{OH}$ ;
- Compound 27:  $R = \text{COOCH}_3$ ,  $R^1 = \text{I}$ ,  $n = 0$ ,  $R^2 = \text{CH}_2\text{OH}$ ,  $R^3$  and  $R^4 = \text{isopropylidene}$ ;

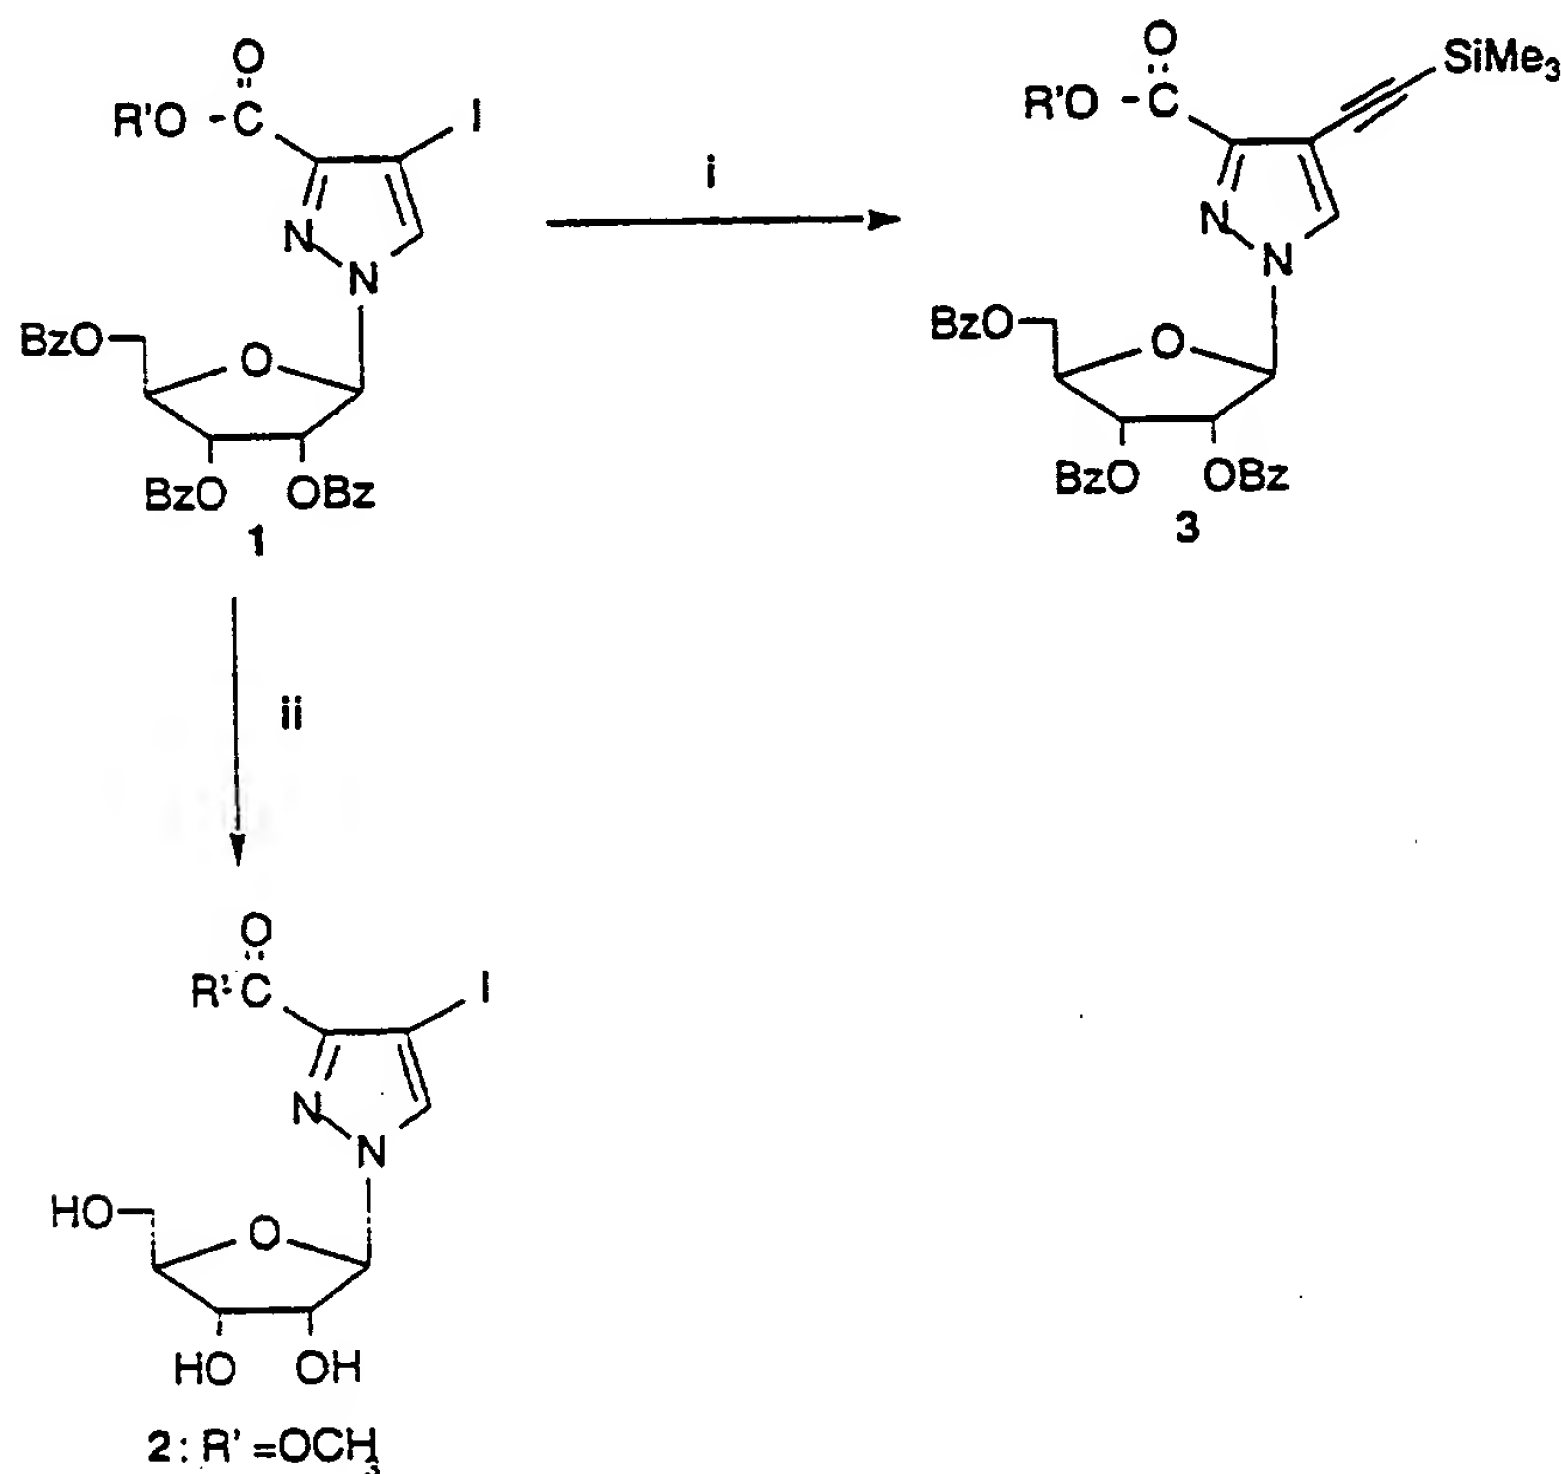

- Compound 29:  $R = \text{COOCH}_3$ ,  $R^1 = \text{I}$ ,  $n = 0$ ,  $R^2 = \text{CH}_2\text{OPO}[\text{OCH}_2\text{CH}_2\text{SCOC}(\text{CH}_3)_3]_2$ ,  $R^3$  and  $R^4 = \text{isopropylidene}$ ;

- Compound 31:  $R = \text{COOCH}_3$ ,  $R^1 = \text{I}$ ,  $n = 0$ ,  $R^2 = \text{CH}_2\text{OPO}[\text{OCH}_2\text{CH}_2\text{SCOC}(\text{CH}_3)_3]_2$ ,  $R^3 = R^4 = \text{OH}$ ;

5 Compounds of general formula (I) may be prepared by the processes described below (in the formulae Me indicates the  $\text{CH}_3$  group, Et the  $\text{CH}_3\text{CH}_2$  group and Bu the  $\text{CH}_3\text{CH}_2\text{CH}_2\text{CH}_2$  group).

The synthesis of iodo- and ethynyl-pyrazole nucleosides 2 and 3, see Scheme 1, starts in both cases from the protected intermediate 1 (which was obtained as described by Manfredini *et al.*  
10 (J. Med. Chem., 1992, 35, 917-924). The treatment with sodium methoxide in methanol affords the deprotected methyl carboxylate derivative 2.

Scheme 1

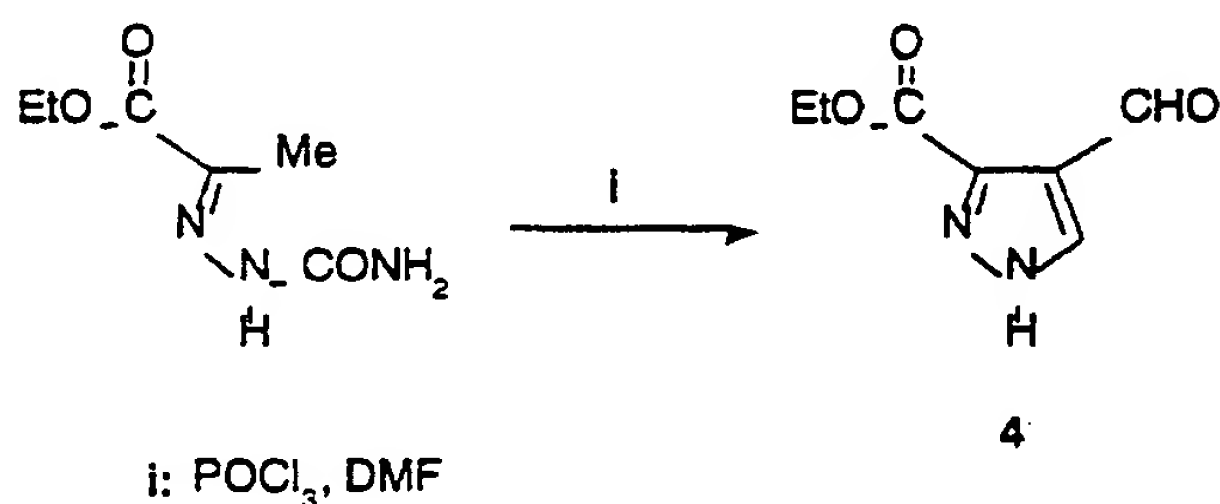

i:  $\text{Pd}(\text{PPh}_3)_2\text{Cl}_2$ , trimethylsilylacetylene,  $\text{Et}_3\text{N}$ ,  $60^\circ$ ; ii:  $\text{MeONa}/\text{M OH}$ .

The ethynyl derivative 3 may be prepared by coupling reaction between 1 and, for example, (trimethylsilyl)acetylene with a catalytic amount of bis (triphenylphosphine) palladium dichloride and CuI in organic solvents such as triethylamine at a temperature range of 60–80° C.

- 5 The new intermediate 4 (4-formyl-3-ethoxycarbonyl pyrazole), previously unreported, may be prepared (Scheme 2) starting from an appropriate semicarbazone such as ethylpyruvate semicarbazone, following a procedure described by Kira *et al.*, J. Heterocyclic Chem., 1970, 7, 25–27, and modified by us, using as reagent for example POCl<sub>3</sub> in an organic solvent such as DMF.

Scheme 2

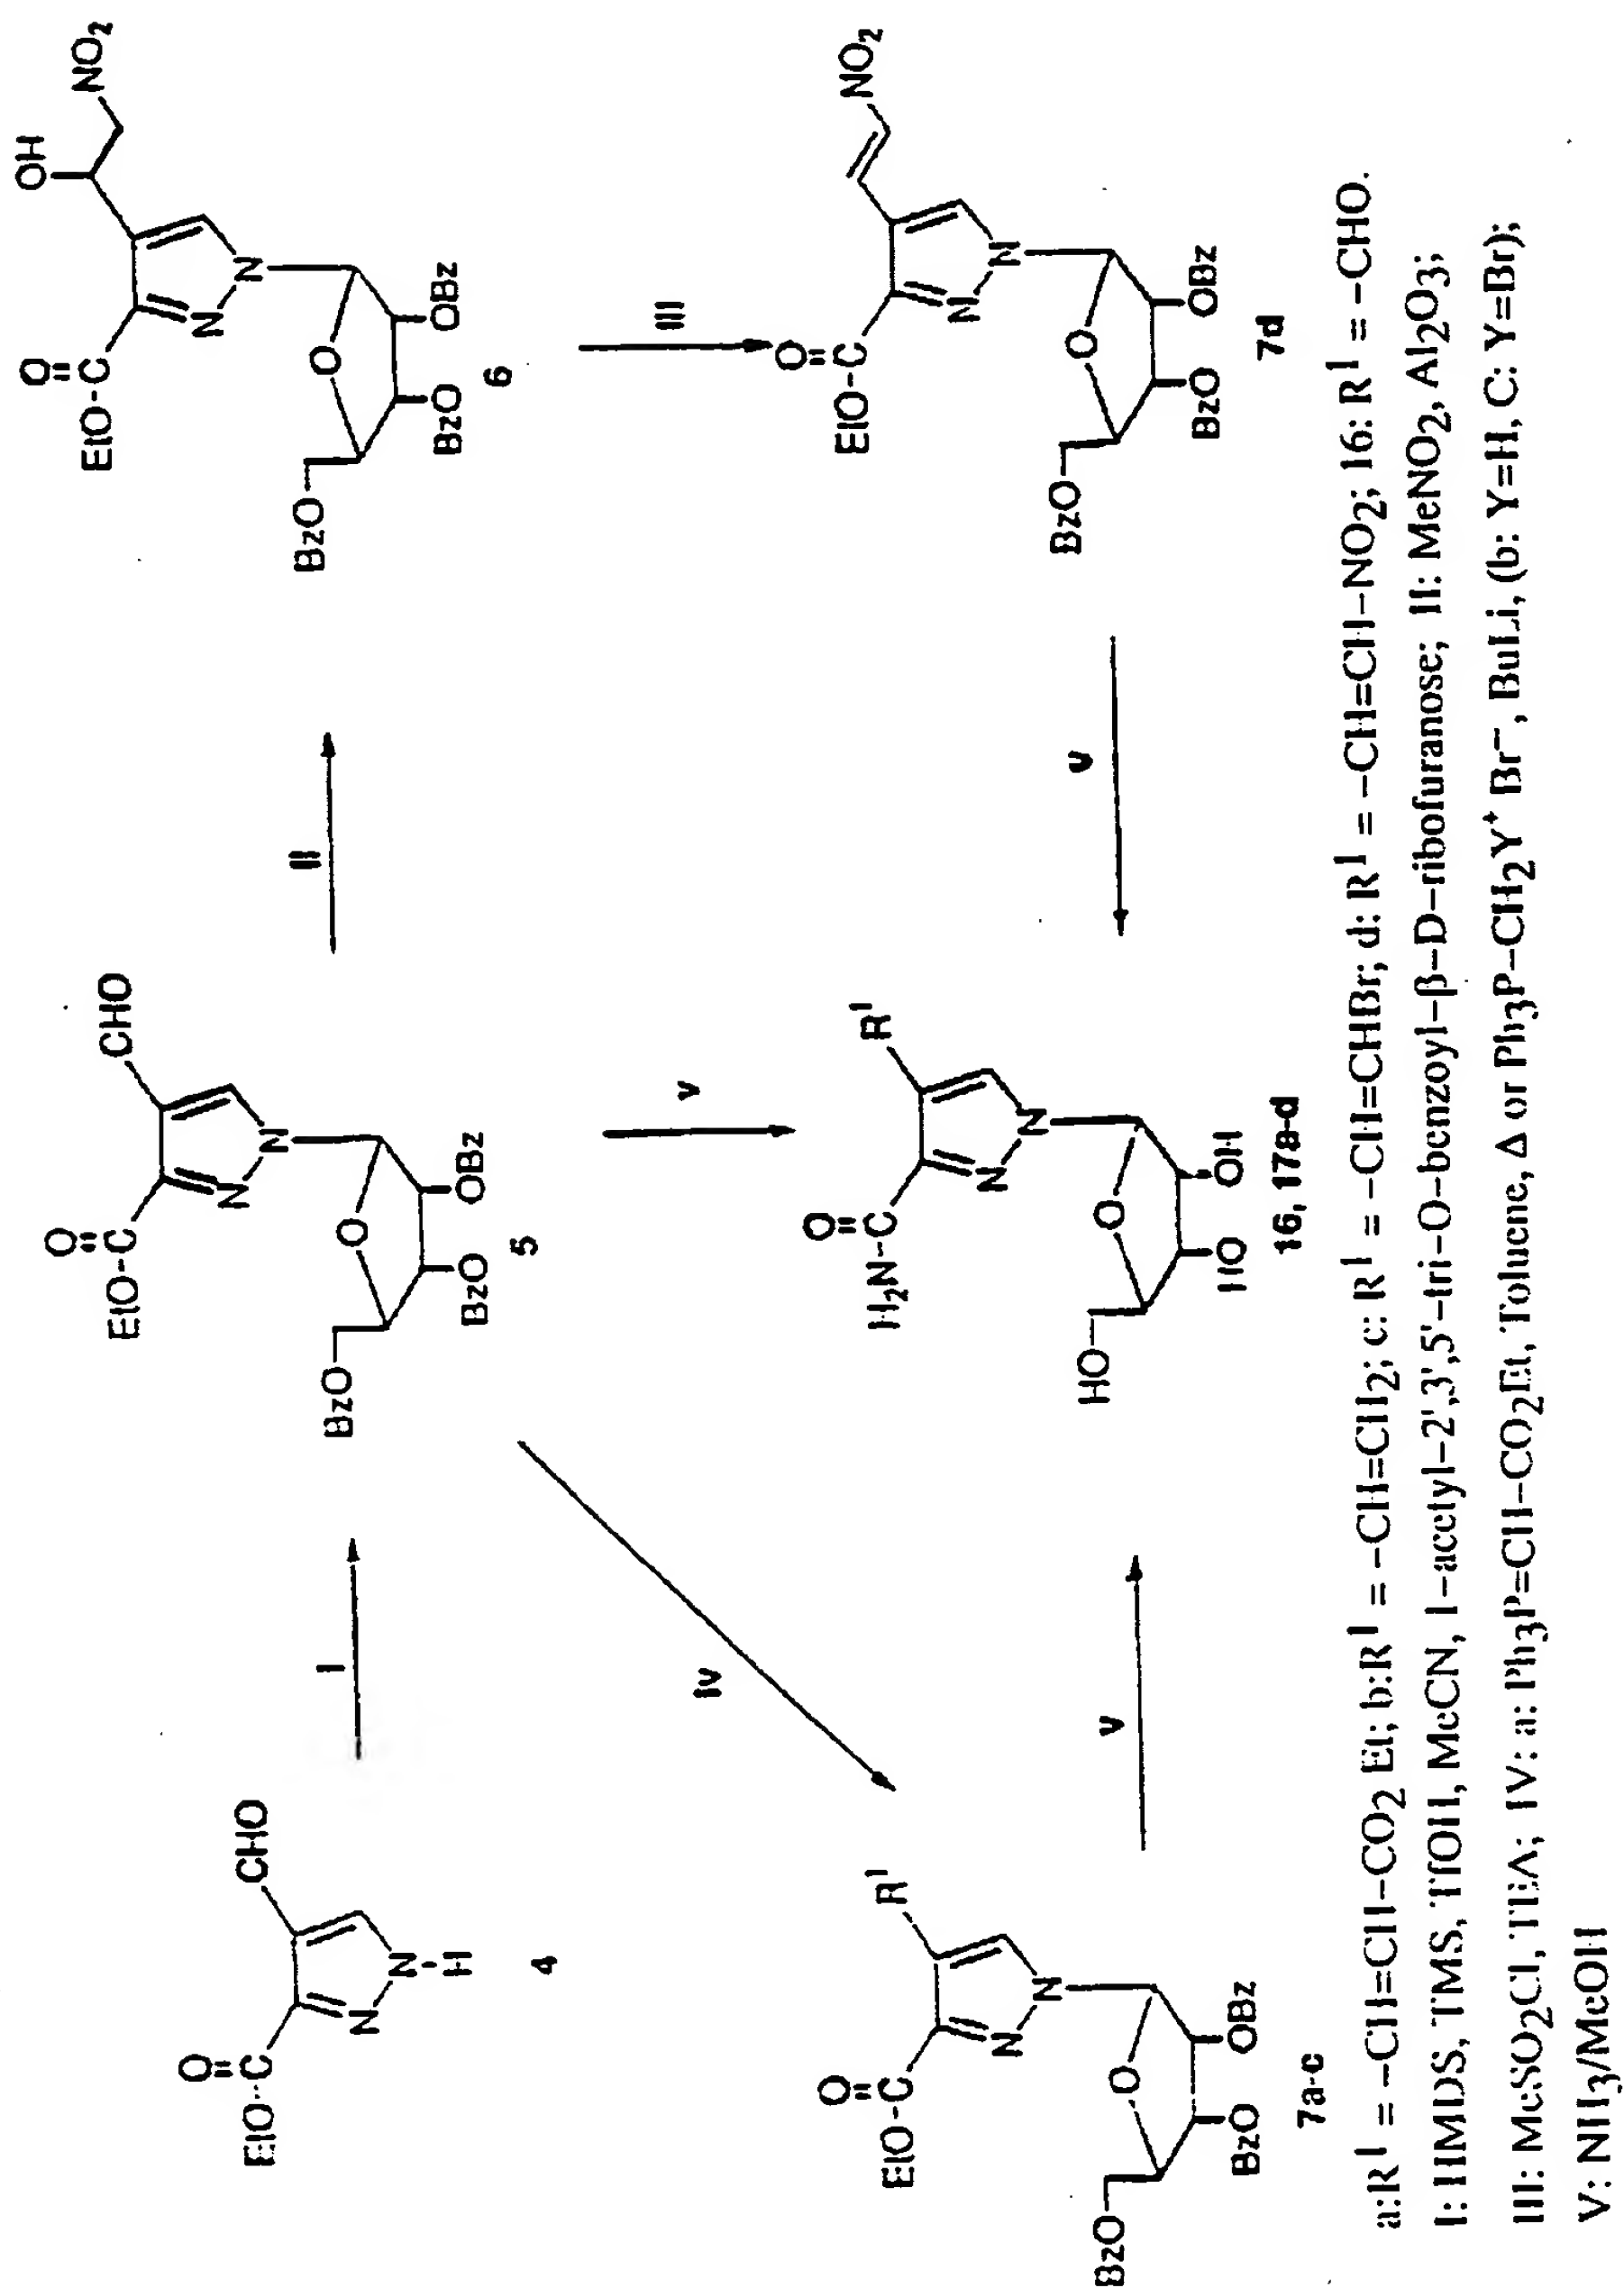

- 10 The glycosylation reaction (depicted in Scheme 3) may be carried out following the procedure described by Manfredini *et al.* (J. Med. Chem., 1992, 35, 917–924). Namely by silylating the heterocycle with hexamethyldisilazane and then treating with 1-O-acetyl-2,3,5-tri-O-benzoyl-β-D-ribofuranose in the presence of trimethylsilyl, chloride and trifluoromethanesulfonate to give the protected nucleoside 5, the key intermediate for the preparation of
- 15 compounds 6 and 7a–d.

The synthesis of derivatives 7a–c may be performed through a Wittig reaction for example of carboxyethylmethylene phosphorane (a), or the appropriate triphenylphosphonium bromide derivative (b,c), and the aldehyde 5. The isomer (E) is predominant (73:5, E:Z) in the case of 7a, whereas a 1:1 E:Z mixture is obtained in the case of 7c.

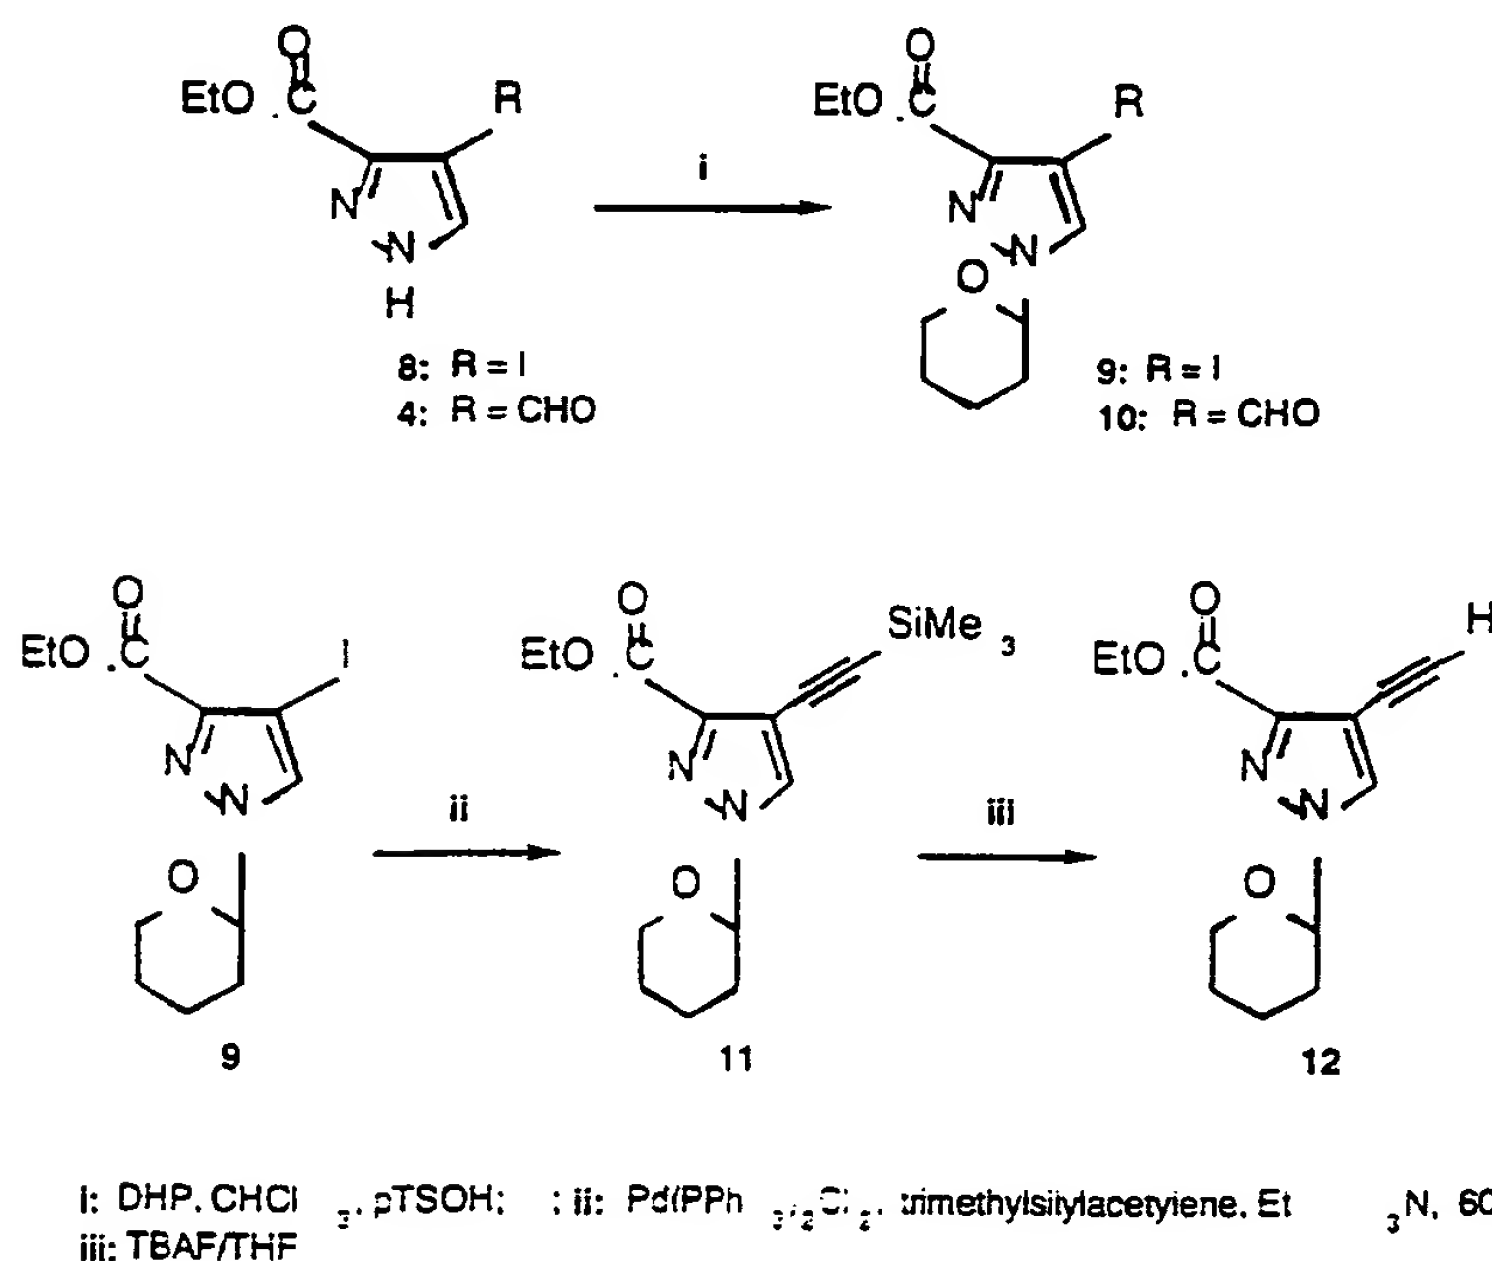

- 20 Compound 5 may be reacted for example with aluminium (III) oxide and nitromethane to give the β-nitroalcohol 6; this may be in turn converted into the nitrovinyl derivative 7d upon dehydration, preferentially with mesylchloride.

Scheme 3

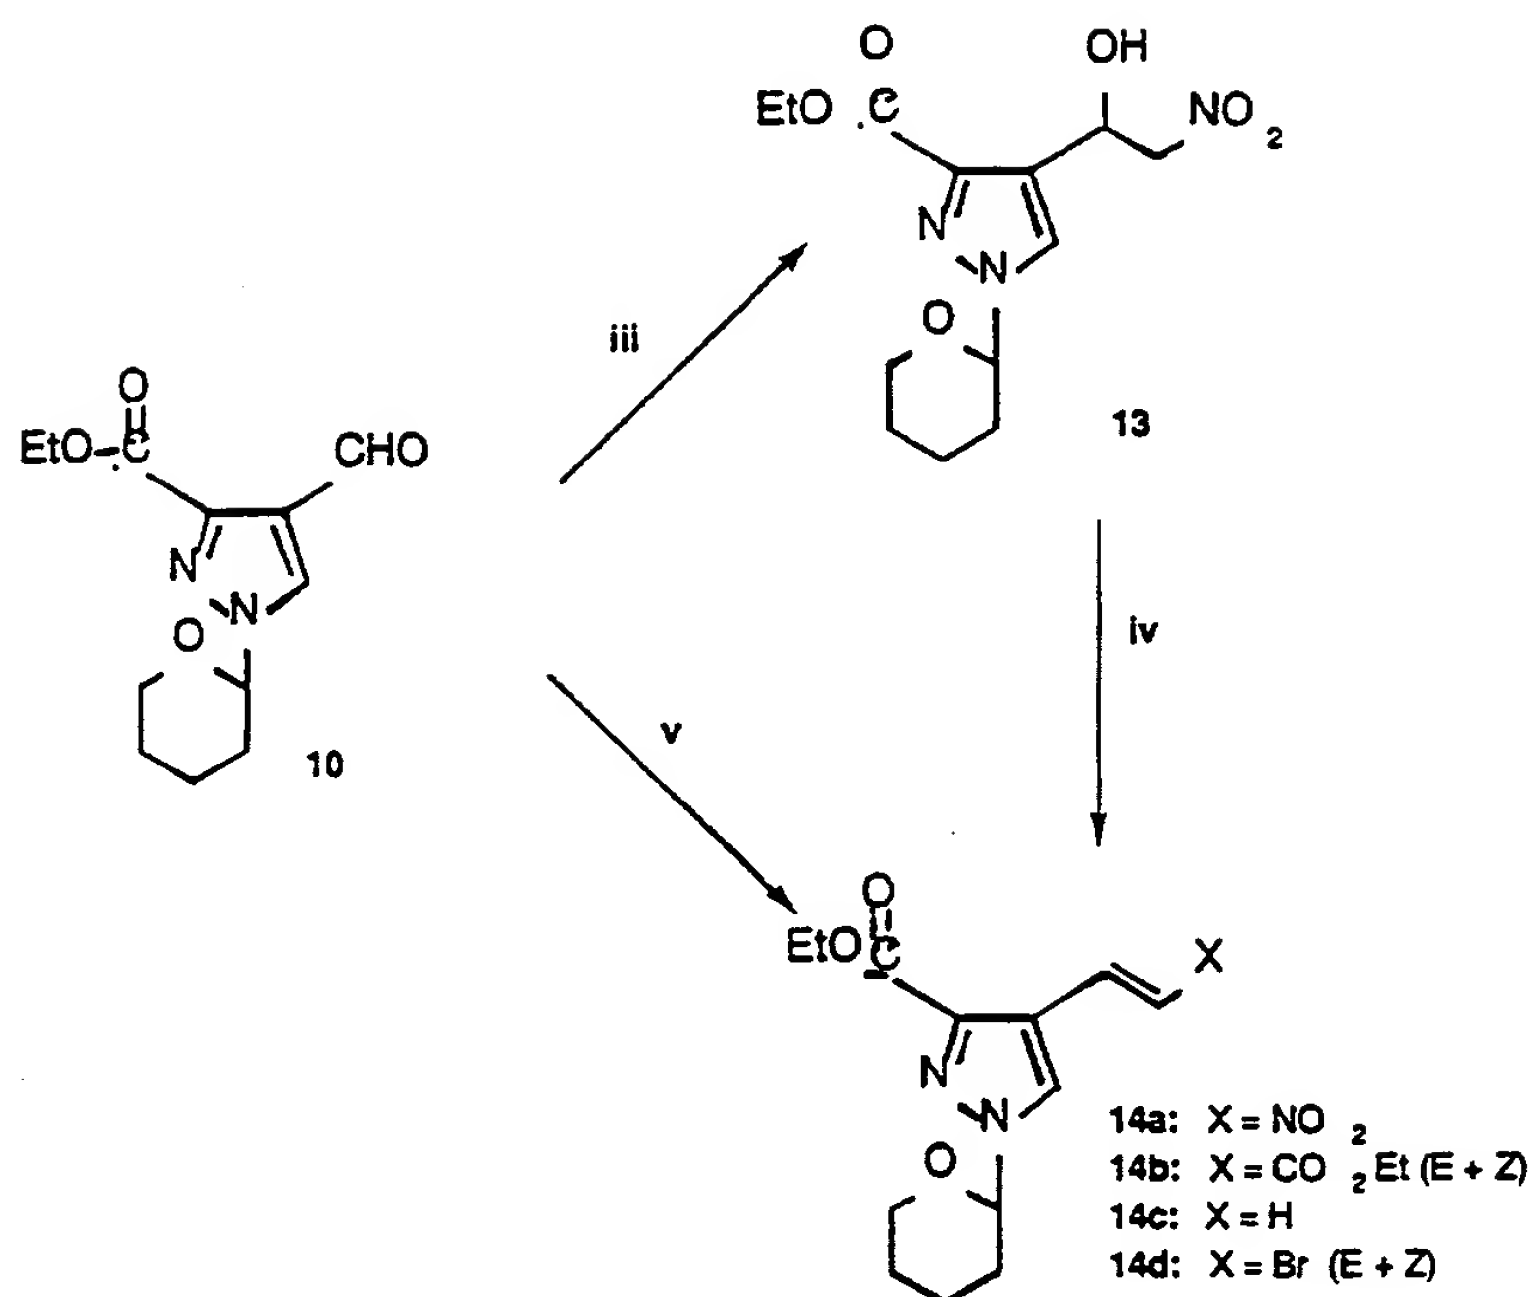

The steps allowing to obtain compounds 9-12 are depicted in Scheme 4. The starting compounds are 4 and 8. The 4-iodo-3-ethoxycarbonyl pyrazole (8) may be obtained as described by Manfredini *et al.* (J. Med. Chem., 1992, 35, 917-924). The intermediates 9 and 10 may be obtained by the acid-catalyzed reaction of 4 and 8, respectively, for example with 2,3-dihydro-4H-pyran (DHP) in the presence of p-toluene-sulfonic acid (TsOH). The ethynyl derivative 11 may be obtained by coupling reaction between compound 9 and, for example, (trimethylsilyl)acetylene with a catalytic amount of bis(triphenylphosphine)palladium dichloride and CuI in an organic solvent such as triethylamine at a temperature range of 60-80° C, preferentially at 60° C. Compound 11 may be in turn deprotected at the ethynyl group, for example by treatment with tetrabutylammoniumfluoride (TBAF) under standard conditions, to give the compound 12.

Scheme 4

As depicted in Scheme 5, the formyl derivative 10 may be treated for example with aluminium (III) oxide and nitromethane to afford the β-nitroalcohol 13 (65% yield), which may be in turn converted into the nitrovinyl derivative 14a upon dehydration performed for example with mesylchloride.

Scheme 5

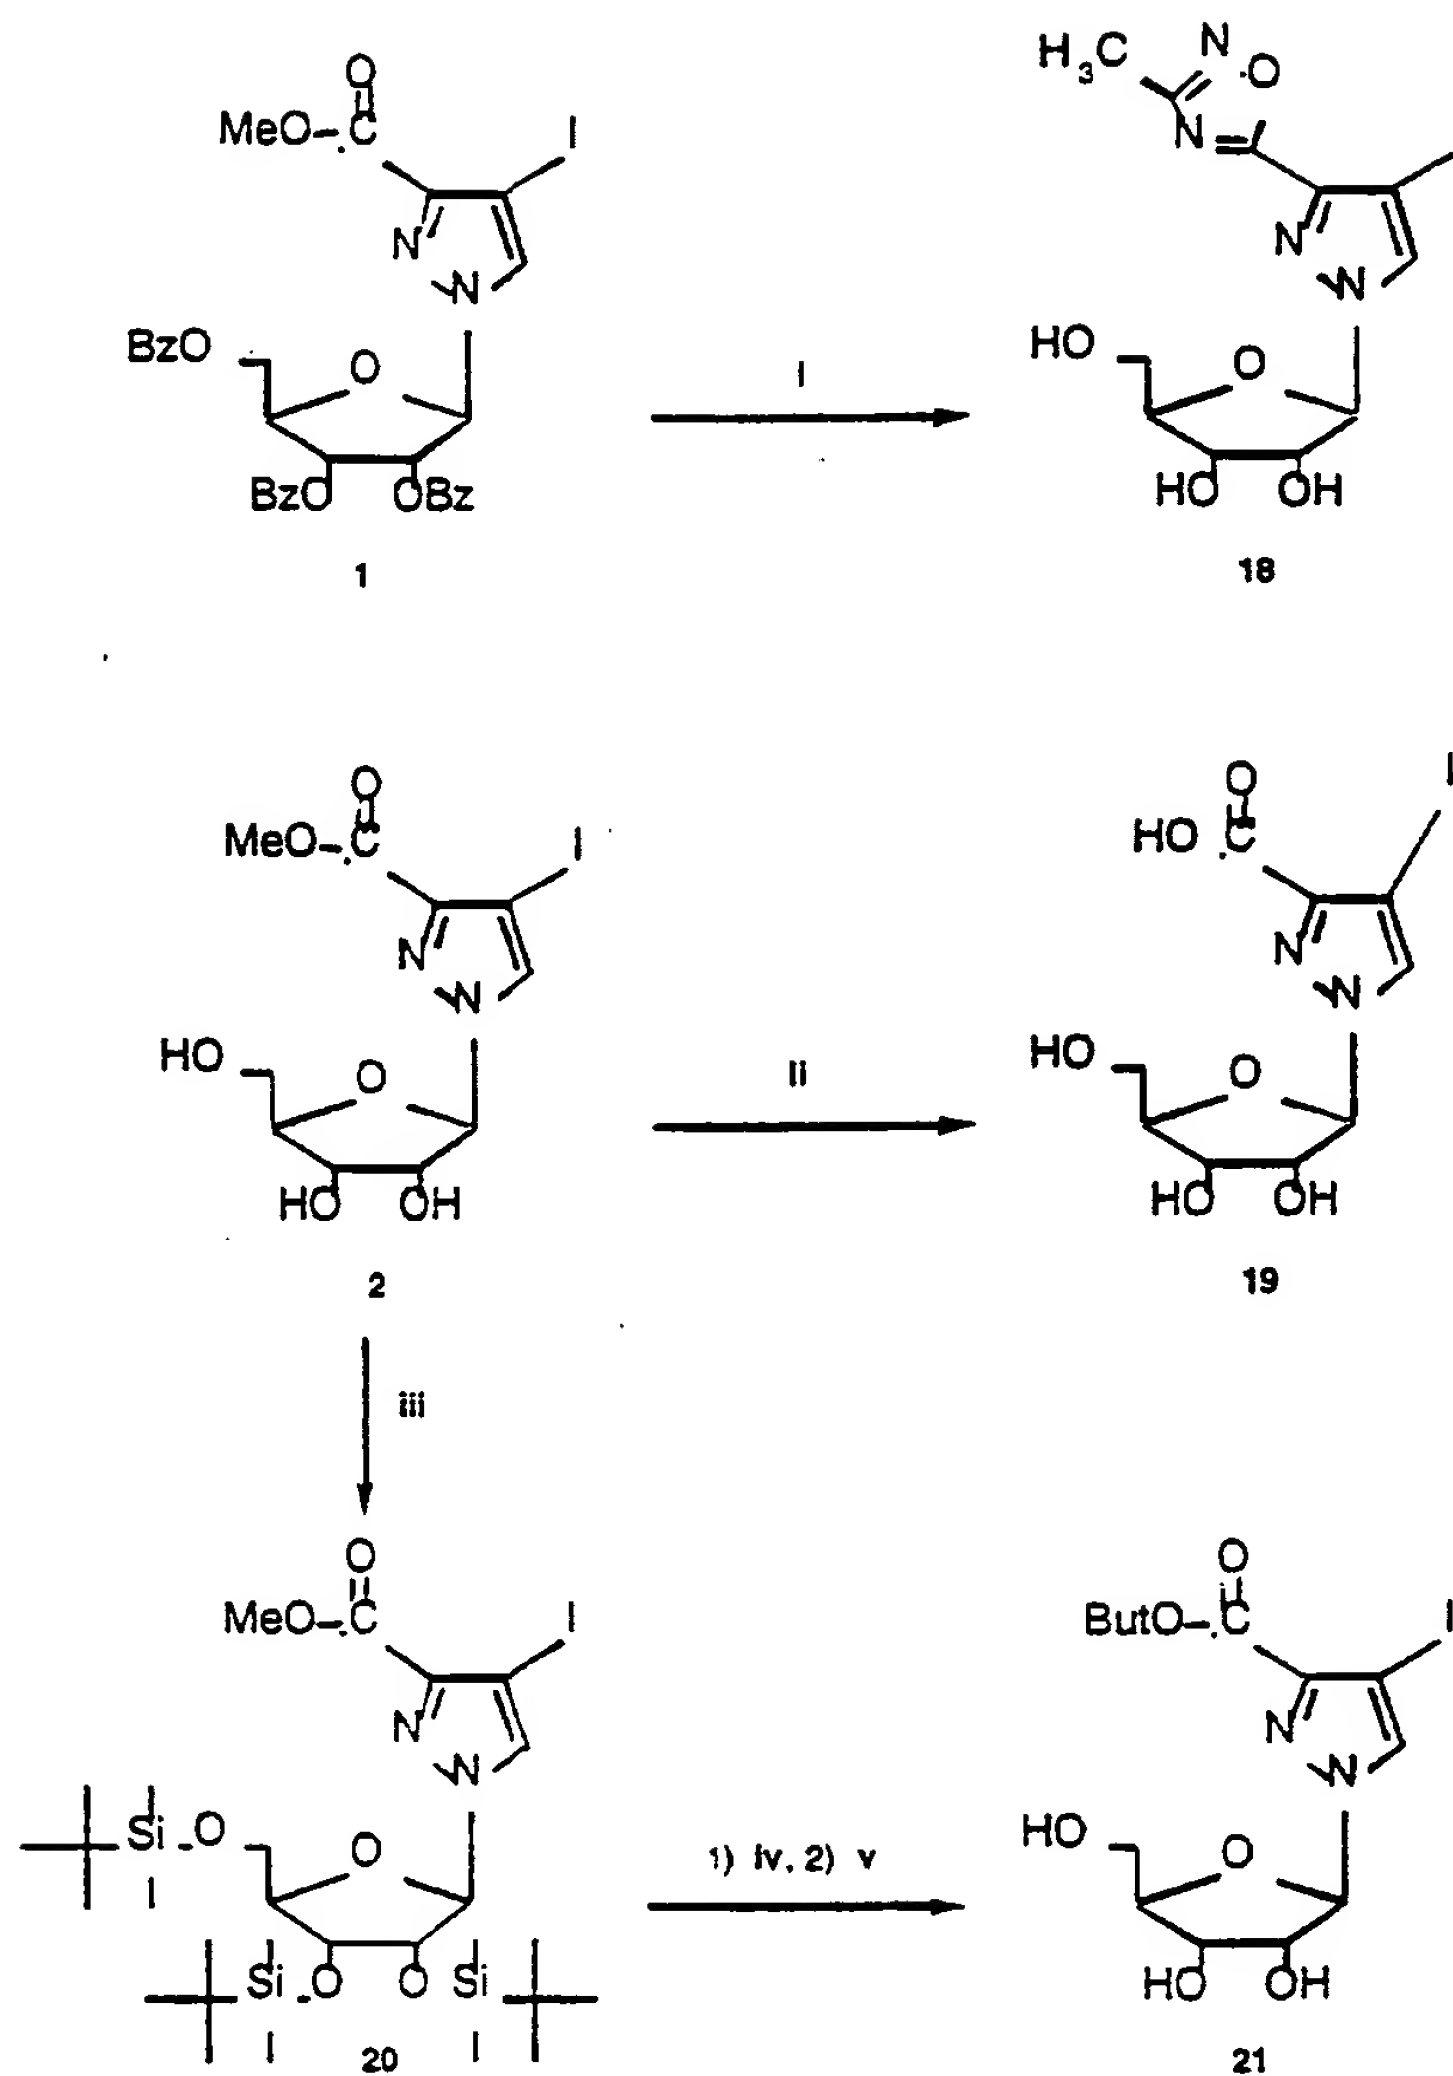

iii: MeNO<sub>2</sub>, Al<sub>2</sub>O<sub>3</sub>; iv: MeSO<sub>2</sub>Cl, TEA; v: Ph<sub>3</sub>P=CHCO<sub>2</sub>Et (b) or  
 Ph<sub>3</sub>P-CH<sub>2</sub>Y<sup>+</sup> Br<sup>-</sup> Y=H (c), Y=Br (d), BuLi

Vinyl derivatives 14b-d may be synthesized as described above for compounds 7a-c by the Wittig reaction for example of carboxyethylmethylene phosphorane (b), or the appropriate triphenylphosphonium bromide derivative (c, d), with the aldehyde 10. Again, the isomer (E) is predominant (73:5, E:Z) in the case of 14b, whereas a 1:1 E:Z mixture is obtained in the case of 14d.

The 3-methyl-1,2,4-oxadiazole derivative 18 may be prepared from the protected methyl ester 1 (Scheme 6) by reaction for example with acetamidoxime in the presence of a base such as sodium hydride. Under these conditions, the benzoyl protecting groups may be concomitantly removed to afford in a single step the compound 18.

Scheme 6

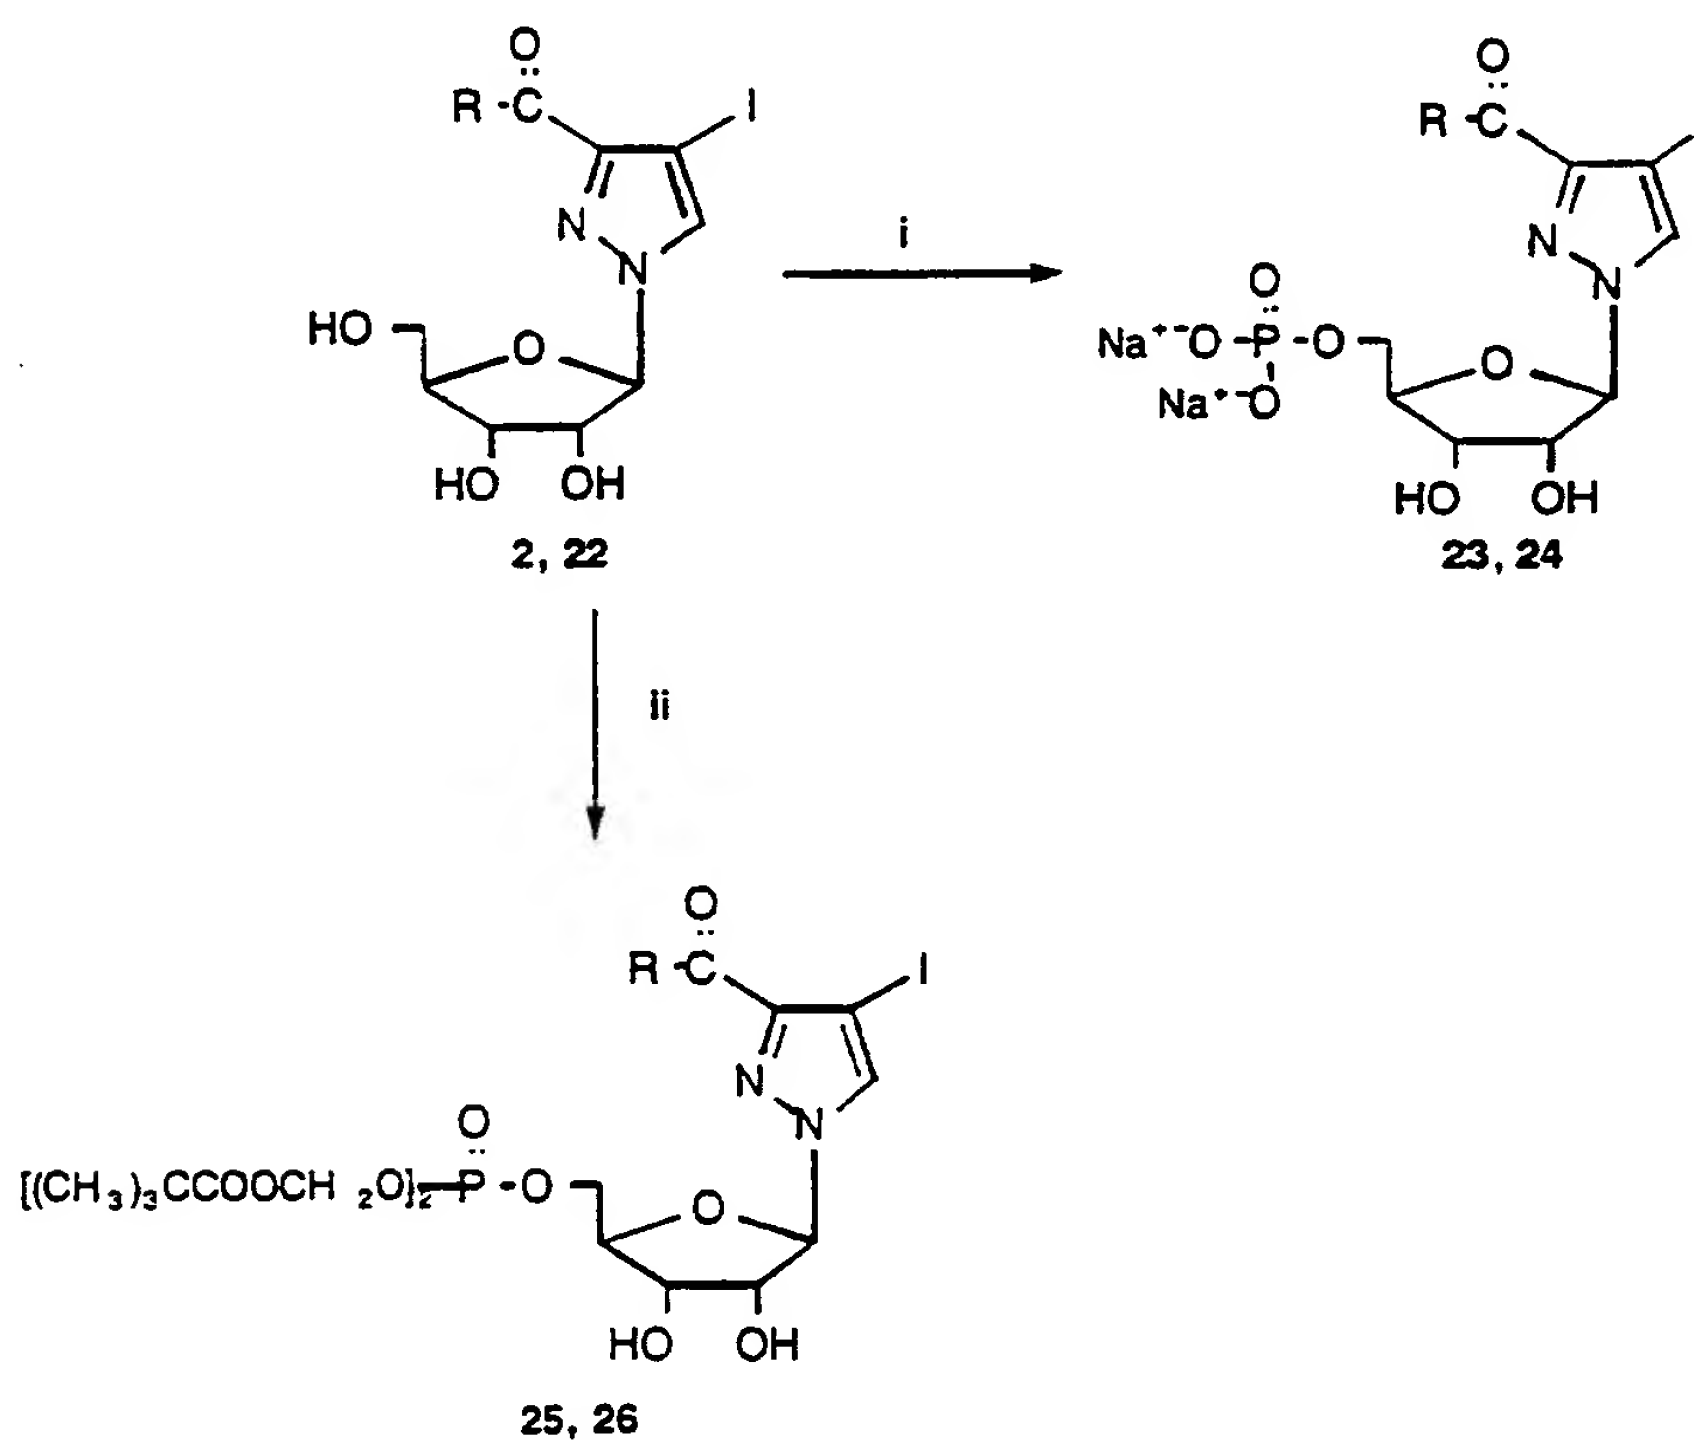

i: acetamidoxime, NaH.  $\Delta$ ; ii: NaOH/ H<sub>2</sub>O; iii: TBDMSCl, DMF; iv: ButOH, NaH.  
Benzene; v: NH<sub>4</sub>F, THF, AcOH

The carboxylic acid derivative 19 (Scheme 6) may be easily obtained by hydrolysis of 2 with a base, for example sodium hydroxide, preferentially at concentrations of 0.35 M. In order to prepare the corresponding butyl ester 21: the hydroxyl groups of the sugar moiety of compound 2 may be protected in a conventional manner, for example with

terbutyldimethylsilylchloride (TBDMS). The persilylated intermediate 20 may be treated for example with an alcohol R"OH wherein R" is C<sub>2</sub>-C<sub>5</sub> alkyl, preferably butanol and sodium hydride in an organic solvent such as benzene to afford the protected butyl ester. Silyl protecting groups may be removed by conventional means, conveniently with ammoniumfluoride (NH<sub>4</sub>F) in methanol, preferentially in the presence of acetic acid, to give the expected compound 21

Scheme 7

2, 23, 25: R = CH<sub>3</sub>O; 22, 24, 26: R = NH<sub>2</sub>

i: POCl<sub>3</sub>, Py, CH<sub>3</sub>CN, H<sub>2</sub>O;

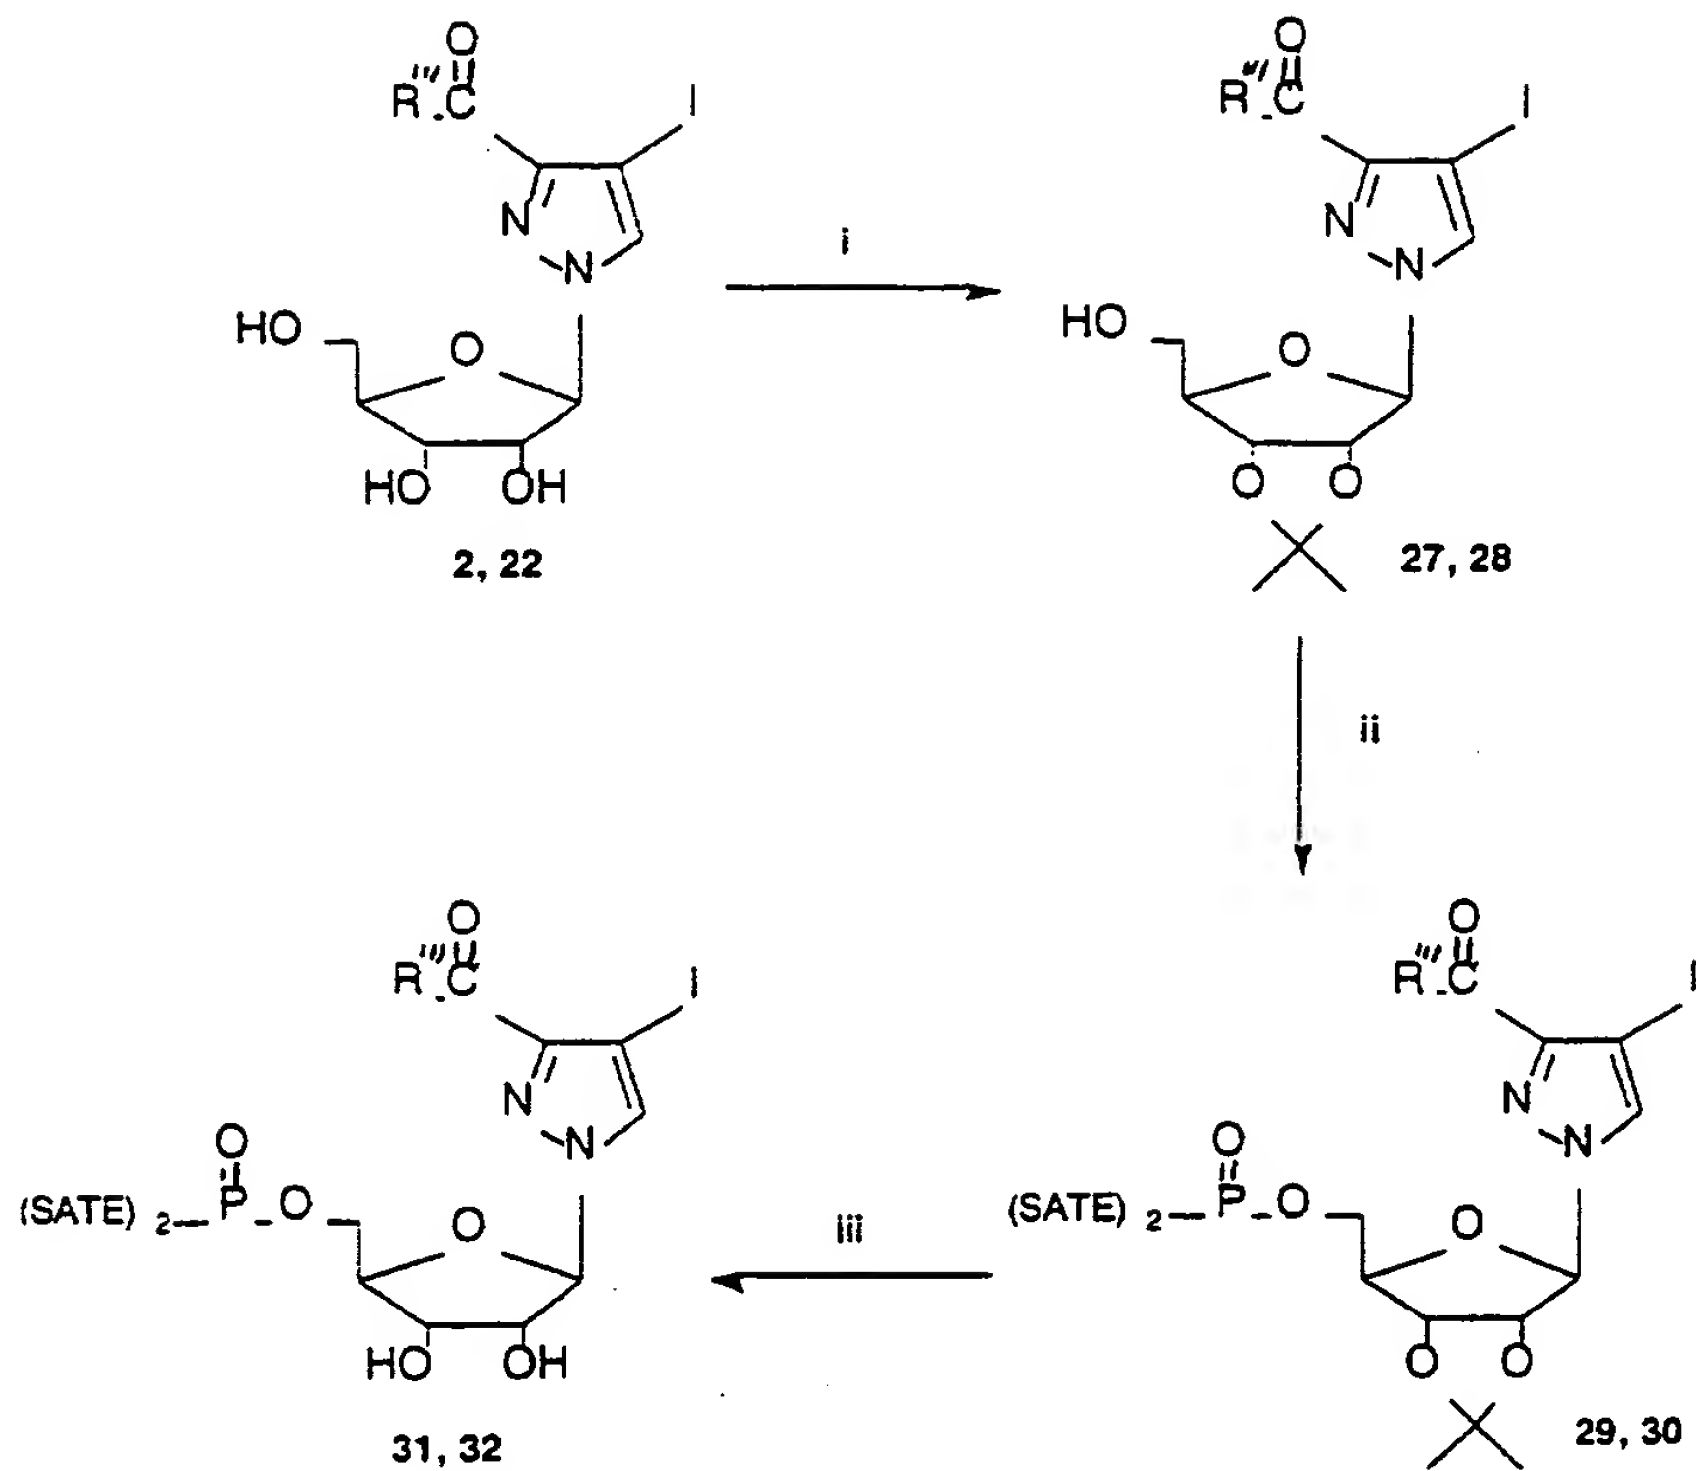

ii: (pivaloyloxymethoxy)<sub>2</sub>POOH, Ph<sub>3</sub>P, (EtO<sub>2</sub>C)N<sub>2</sub>, CH<sub>3</sub>CON(CH<sub>3</sub>)<sub>2</sub>

Regioselective introduction of monophosphate on 5' hydroxyl groups of the deprotected derivatives 2 (Scheme 7) may be effected by conventional methods, for example by means of a phosphorylating agent generated in situ starting from POCl<sub>3</sub> and pyridine in the presence of polar solvents such as acetonitrile and water and subsequently salifying the obtained product with cationic exchange resin thereby obtaining the disodium salt 23.

The 5'-bis[(pivaloyloxy)methyl] monophosphate derivative 25 [abbreviated as bis(POM) phosphotriester] may be obtained starting from the deprotected nucleosides 2 by coupling with bis[(pivaloyloxy)methyl] hydrogen phosphate, prepared in an organic solvent such as dimethylacetamide in the presence, for example, of triphenylphosphine and diethyl azodicarboxylate preferably at 60 °C (Scheme 7).

The synthesis of the phosphotriesters 5'-bis(S-pivaloyl-2-thioethyl) monophosphate 31 [abbreviated as bis(SATE) phosphotriesters], reported in Scheme 8, may be performed starting from the protected derivatives 27. The latter may be in turn obtained starting from nucleosides 2 starting from 2,2-dimethoxypropane in the presence of bis-(p-nitrophenyl)-phosphate in an organic solvent such as acetone, preferentially anhydrous, to give the corresponding 2',3'-O-isopropylidene derivatives. The free 5'-hydroxyl groups may be reacted with the bis(S-pivaloyl-2-thioethyl) N,N-diisopropyl-phosphoramidite in an organic solvent such as THF, in the presence, for example, of 1H-tetrazole at room temperature. The phosphite group may be then oxidized for example with t-butylhydroperoxyde to afford the protected bis(SATE) phosphotriesters 29. The removal of the protecting group may be carried out by conventional means such as acid hydrolysis, conveniently by reaction with for example TsOH in a polar organic solvent such as methanol, to give the expected compounds 31.

Scheme 8

2, 27, 29:  $R''' = CH_3O$ ; 22, 28, 30  $R = NH_2$ ; SATE =  $[(CH_3)_3CCOSCH_2CH_2O]_2$

i:  $(CH_3)_2CH(OCH_3)_2$ , BNPP, acetone;

ii:  $(SATE)_2-P-N-(i-Pr)_2$ , 1H-Tetrazole, THF, t-BuOOH;

iii: TsOH, MeOH

## MATERIALS AND METHODS

Compounds. The compounds used in this study were solubilized in DMSO at an initial concentration of 100 mg/mL and then serially diluted in RPMI 1640.

Cells. Cell lines were purchased from the American Type Culture Collection (ATCC).

5 Leukemia- and lymphoma-derived cells were grown in RPMI-1640 medium supplemented with 10% FCS, 100 units/mL penicillin and 100  $\mu$ g/mL streptomycin. Cell cultures were incubated at 37° C in a humidified, 5% CO<sub>2</sub> atmosphere. The cell lines used were the following: L1210, mouse leukemia; Wil2-NS, human splenic B-lymphoblastoid cells; CCRF-SB, human acute B-lymphoblastic leukemia; Raji, human Burkitt lymphoma; CCRF-  
10 CEM and MOLT-4, human acute T-lymphoblastic leukemia; C8166 and MT-4, human CD4+ T-cells containing an integrated HTLV-1 genome.

Solid tumor-derived cells were grown in their specific media supplemented with 10% FCS and antibiotics. The cell lines used were the following: CHO-K1, chinese hamster ovary; HT-29, human colon adenocarcinoma; HeLa, human cervix carcinoma; ACHN, human renal  
15 adenocarcinoma; 5637, human bladder carcinoma; IMR-32, human neuroblastoma. Cell cultures were incubated at 37° C in a humidified, 5% CO<sub>2</sub> atmosphere.

The absence of mycoplasma contamination from both suspension and monolayer cultures was checked periodically by the Hoechst staining method.

Viruses. Human immunodeficiency virus type-1 (HIV-1. HTLV/III<sub>B</sub> strain) was obtained  
20 from supernatants of persistently infected H9/III<sub>B</sub> cells. The HIV-1 stock solution had titres of  $4.5 \times 10^6$  cell culture infectious dose fifty (CCID<sub>50</sub>)/mL. The other viruses used in this study were purchased from the ATCC. Stock solutions of herpes simplex types 1 and 2 (HSV-1. HSV-2), vaccinia. Vesicular Stomatitis Virus (VSV), Cocksackie B2, were prepared in Vero cells and had titres of  $5.0 \times 10^7$ ,  $1.0 \times 10^8$ ,  $2.0 \times 10^7$ ,  $4.0 \times 10^8$  and  $1.0 \times 10^8$  plaque forming units  
25 (PFU) / mL. respectively.

Antiproliferative assays. Exponentially growing leukemia and lymphoma cells were resuspended at a density of  $1 \times 10^5$  cells/mL in growth medium containing serial dilutions of the drugs, alone or in combination. Cell viability was determined after 96 hrs at 37 °C by the 3-(4,5-dimethylthiazol-2-yl)-2,5-diphenyl-tetrazolium bromide (MTT) method. as  
30 previously described by Denizot F. and Lang R. (J. Immunol. Methods 89, 271-277, 1986) and by Pauwels *et al.* (J. Virol. Methods 20, 309-321, 1988).

Activity against solid tumor-derived cells was evaluated in exponentially growing cultures seeded at  $5 \times 10^4$  cells/mL and allowed to adhere for 16 hrs to culture plates before addition of the drugs. Cell viability was determined by the MTT method four days later. Cell growth at each drug concentration was expressed as percentage of untreated controls and the concentration resulting in 50% growth inhibition (IC<sub>50</sub>) was determined by linear regression analysis. The effect of drug combinations was evaluated by isobolograms. FIC indexes were calculated for each concentration ratio according to Suhnel J. (Antiviral Res. 13, 23-40, 1990).

Cytotoxicity assays. Peripheral blood lymphocytes (PBL) from HIV-negative donors were obtained by separation on Fycoll-Hypaque gradients. After extensive washings, cells were resuspended ( $1 \times 10^6$  cells/mL) in RPMI-1640 with 10% FCS and incubated overnight.

For cytotoxicity evaluations in proliferating PBL, non-adherent cells were resuspended at  $1 \times 10^6$  cells/mL in growth medium, stimulated with PHA ( $2.5 \mu\text{g/mL}$ ) for 24 hrs before dilution to  $1 \times 10^5$  cells/mL in medium containing PHA ( $2.5 \mu\text{g/mL}$ ), IL-2 (50 U/ml) and various concentrations of the test compounds. Viable cell numbers were determined six days later. Under these conditions, untreated PBL were able to undergo exponential growth up to four cell cycles, as determined by viable cell counts.

For cytotoxicity evaluations in resting PBL, non-adherent cells were resuspended at high density ( $1 \times 10^6$  cells/mL) and treated for as long as 3 days with the test compounds. Then, the cells were extensively washed to remove the inhibitors and were stimulated with PHA for 24 hrs before being diluted to  $1 \times 10^5$  cells/mL in medium containing PHA and IL-2. Cell viability was determined after incubation at 37°C for six days.

Myeloid precursors of granulocyte-monocytes (CFU-GM) were obtained from the bone marrow of healthy donors by separation on Fycoll-Hypaque gradients. After extensive washings, cells ( $2 \times 10^5$ /mL) were resuspended in Iscove medium containing 0.3% agar and growth factors from the supernatant of 5637 cells. After ten days at 37° C, colonies (composed of about 40 cells) of CFU-GM were scored under the light microscope.

Anti-HIV assays. Activity of compounds against the HIV multiplication in acutely infected cells was based on inhibition of the virus-induced cytopathogenicity in MT-4 cells. Briefly, 50  $\mu\text{L}$  of culture medium additioned of 10% FCS containing  $1 \times 10^5$  MT-4 cells (infected de novo with HIV-1 at a multiplicity of infection of 0.01) were added to each well of flat bottomed microtitre trays containing 50  $\mu\text{L}$  of medium with or without serial dilutions of the test compounds, alone or in combination. After 4 days incubation at 37° C, the number of

viable MT-4 cells was determined by the 3-(4,5-dimethylthiazol-2-yl)-2,5-diphenyl-tetrazolium bromide (MTT) method (22). Cytotoxicity of compounds was evaluated in parallel with their antiviral activity and was based on the viability of mock-infected cells, as monitored by the MTT method.

- 5 Antiviral assays. The antiviral activity against HSV-1 and -2 was evaluated by either the plaque reduction assay in Vero cells or the yield reduction assay in Hela cells. The activity against vaccinia, VSV and Coxsackie B<sub>2</sub> viruses was evaluated by the MTT method in Vero cells infected at a multiplicity of infection of 0.01.

- 10 Kaposi's model in mice. Kaposi's sarcoma secreted products (KS<sub>sup</sub>) were obtained from cell-free supernatants of cell cultures from Kaposi's lesions as previously described by Albini A., et al. (Int. J. Oncol. 1, 723-730, 1992). The standard amount of KS<sub>sup</sub> inoculated per sample corresponded to the culture supernatant of  $4 \times 10^5$  cells. Liquid Matrigel solutions containing KS<sub>sup</sub>, heparin (22 U/ml) and various concentrations of the test compounds were injected subcutaneously into the flanks of C57bl/6 male mice (final volume 600  $\mu$ l) where they  
15 formed a polymerized support. Five days after injection, the animals were sacrificed and the gels were recovered and weighted. The haemoglobin content of these gels was measured using a Drabkin reagent Kit 525 (Sigma) and its concentration, determined using a standard curve, was normalized to 100 mg of the recovered gel.

**BIOLOGICAL ACTIVITY**

Antiproliferative activity of compounds of general formula (I), in vitro. The antiproliferative effect of selected compounds of the present invention was evaluated against a panel of human leukemia, lymphoma and solid tumor cell lines, together with that of ribavirin, selenazofurin and doxorubicin, used as reference drugs (Table 1).

Table 1. Comparative antiproliferative activity of compounds of formula (I) and reference antitumor drugs.

| Cell line             | IC <sub>50</sub> [μM] |       |             |               |               |
|-----------------------|-----------------------|-------|-------------|---------------|---------------|
|                       | 2                     | 4 / 8 | Ribavirin   | Selenazofurin | Doxorubicin   |
|                       |                       |       |             |               |               |

\*Inhibitory concentration fifty: compound concentration ( $\pm$  SD) required to reduce cell growth by 50% under conditions allowing untreated cell controls to undergo at least three consecutive rounds of multiplication.

- L1210, mouse leukemia; Wil2-NS, human splenic B-lymphoblastoid cells; CCRF-SB, human acute B-lymphoblastic leukemia; Raji, human Burkitt lymphoma; CCRF-CEM and MOLT-4, human acute T-lymphoblastic leukemia. C8166 and MT-4, human CD4<sup>+</sup> T-cells containing an integrated HTLV-1 genome; CHO-K1, chinese hamster ovary; HT-29, human colon adenocarcinoma; HeLa, human cervix carcinoma; ACHN, human renal adenocarcinoma; 5637, human bladder carcinoma; IMR-32, human neuroblastoma.
- 10 Compound 2 showed potent inhibition of leukemia and lymphoma cell proliferation (IC<sub>50</sub> in the range 0.2–2.4  $\mu$ M) and turned out only 2–4 times less potent against carcinoma and neuroblastoma cell lines (IC<sub>50</sub> in the range 2.9–8.6  $\mu$ M). Overall, no significant differences could be seen in both potency and spectrum of antiproliferative activity between 2 and selenazofurin. Doxorubicin was the most potent compound (IC<sub>50</sub> in the range 0.03–0.9  $\mu$ M),
- 15 ribavirin the weaker (IC<sub>50</sub> in the range 5.7–27  $\mu$ M). On the other hand, compounds 4 and 8 resulted totally inactive, allowing to conclude that the withdrawal of ribose from compounds of formula (I) abates the antiproliferative activity (see compounds 4 and 8). However, when ribose is substituted for by a tetrahydropyranyl group (i.e. compounds of formula (I) wherein n = 1), the antiproliferative activity is restored (see Table 7). Among these derivatives, the more
- 20 active compounds were those carrying the following groups: CH=CHNO<sub>2</sub>, CH=CHBr or CHO at position 4 in the pyrazole ring.

Table 2. Antiproliferative activity of compounds of formula (I) wherein n = 1.

| Cell line             | <sup>a</sup> IC <sub>50</sub> [ $\mu$ M] |     |      |      |     |        |        |      |      |
|-----------------------|--|-----|------|------|-----|--------|--------|------|------|

Inhibitory concentration fifty: compound concentration ( $\pm$  SD) required to reduce cell growth by 50% under conditions allowing untreated controls to undergo at least three consecutive multiplication rounds. Values are the mean of three separate experiments. Variability among triplicate samples was less than 12%.

- 5 L1210, mouse leukemia; Wil2-NS, human splenic B-lymphoblastoid cells; CCRF-SB, human acute B-lymphoblastic leukemia; Raji, human Burkitt lymphoma; C8166 and MT-4, human CD4<sup>+</sup> T-cells containing an integrated HTLV-1 genome; CHO-K1, chinese hamster ovary; HT-29, human colon adenocarcinoma; HeLa, human cervix carcinoma; ACHN, human renal adenocarcinoma.

Cytotoxicity of compounds of formula (I) in normal human cells, in vitro. In order to get more insights into the cytotoxicity of 2, the drug was tested in vitro against peripheral blood lymphocytes (PBL), either before or after PHA stimulation, and against bone marrow granulocyte/monocyte (CFU-GM) precursors from healthy donors. Selenazofurin and various anticancer agents of current clinical use were run as reference drugs (Table 2).

Table 3. Comparative cytotoxicity of compound 2 and reference anticancer drugs in human cells.

| Cells                               | <sup>a</sup> CC <sub>50</sub> [μM] |               |               |          |               |                 |
|-------------------------------------|------------------------------------|---------------|---------------|----------|---------------|-----------------|
|                                     | 2                                  | Selenazofurin | MTX           | Cis-Pt   | Doxorubicin   | Taxol           |

| <sup>e</sup> Leukemia               | 1.5                                | 1.2           | 0.01          | 2.6      | 0.1           | 0.007           |

<sup>a</sup>Cytotoxic concentration fifty: compound concentration (± SD) required to reduce cell multiplication (PBL) or colony formation (CFU-GM) by 50%.

<sup>b</sup>PBL were stimulated with PHA and then resuspended in IL<sub>2</sub>-containing medium in the presence of the drugs.

10 <sup>c</sup>PBL were treated with test drugs for 3 days and then were stimulated with PHA and resuspended in drug-free medium.

<sup>d</sup>CFU-GM, colony forming units of bone marrow hematopoietic progenitors of granulocytes, macrophages.

<sup>e</sup>Data are the mean IC<sub>50</sub> values obtained in leukemia cell lines.

15 Compound 2 proved cytotoxic (CC<sub>50</sub> = 2.6 μM) for PHA-stimulated PBL at concentrations similar to those active against leukemic cells (mean IC<sub>50</sub> = 1.5 μM). On the contrary, following a 3 day treatment with of compound 2 at 500 μM, resting PBL maintained unaltered their capability to proliferate upon removal of the drug and stimulation with PHA. Under the

same conditions, only selenazofurin and the antimitotic drug taxol showed a selective inhibition of proliferating PBL, whereas MTX, cis-platinum and doxorubicin proved equally cytotoxic to proliferating and resting lymphocytes. Moreover, when the CC50 of each compound for myeloid precursor cells were evaluated, 2 was less cytotoxic than selenazofurin and doxorubicin. Therefore, compound 2 proved comparable to selenazofurin and well-inferior to doxorubicin in terms of potency and spectrum of antiproliferative activity, and significantly less cytotoxic against PBL and bone marrow haematopoietic precursors.

**Effect of 2 in combination with various antitumor drugs.** In view of the structural similarities shared by 2, tiazofurin and ribavirin, the antiproliferative effects of these compounds in combination with each other were evaluated in CEM cells.

Table 4. Antiproliferative effect of compound 2 in combination with other anticancer drugs.

| Drug                 | [ $\mu$ M]   | Viability (% of untreated controls) |                        |

| 2 + Taxol            | 0.75 + 0.008 | 20                                  | 25                     |

<sup>a</sup>Values are the mean of three separate experiments carried out in CEM cells. Variability among triplicate samples was less than 12%.

<sup>b</sup>Value predicted for additive effect.

<sup>c</sup>Cells were pretreated with compound 2 for 12 hrs.

5 <sup>d</sup>Significant synergism (the observed value is less than 70% of the predicted value).

Within a wide concentration range, compound 2 proved synergistic with ribavirin and additive with tiazofurin or selenazofurin; on the other hand, tiazofurin confirmed synergistic in combination with ribavirin and additive with selenazofurin (data not shown).

10 We then investigated the effects of simultaneous and sequential treatments of CEM cells with 2 and each of several antitumor agents with different modes of action (Table 4). Following simultaneous treatment, combinations of 2 with 6MP resulted in a synergistic effect. By contrast, paired combinations of compound 2 with each of the other antimetabolites araA, 6TG, 5FU and MTX, the alkylating agent cisplatin, the intercalating compound doxorubicin or the antimitotic drug taxol gave additive antiproliferative effects. Interestingly, 15 when the cultures were pretreated for 12 hrs with compound 2 before the addition of the second antitumor agent, the pyrazole derivative proved synergistic also in combination with 6TG and 5FU.

**Susceptibility to other antitumor drugs of cells resistant to compound 2.** Cells resistant to compound 2 (ACHN/R1) were established by cultivation of sensitive ACHN cells in medium 20 containing stepwise increasing concentrations of the drug. A stable clone of ACHN/R1 cells showing an IC<sub>50</sub> 30 fold higher than that of the parental cell line was obtained after 4 months from the first exposure to compound 2 at 3  $\mu$ M. Before evaluating the sensitivity of ACHN/R1 cells to the other antitumor agents, cells resistant to 2 were allowed to grow for three cell cycles in drug-free medium. As shown in Table 5, cells resistant to 2 proved fully susceptible 25 to inhibition by all anticancer drugs tested with two exceptions: 6TG and 5FU, towards which ACHN/R1 were 7-fold and 2-3 fold more resistant than the parental cell line, respectively. Viceversa, 2 proved efficacious in inhibiting both KB<sup>VCR</sup> and KB<sup>VP16</sup> cells expressing the MDR phenotype (results not shown).

**Potentiation of the anti-HIV-1 activity of antiretroviral drugs by compound 2.** When 30 compound 2 was tested against HIV-1, it showed no antiviral activity per se. However, when tested in combination with 2',3'-dideoxyinosine (ddI), 2',3'-dideoxyadenosine (ddA), 9-[2-

(phosphonomethoxy)ethyl]adenine (PMEA), 9-[2-(phosphonomethoxy)propyl]guanine (PMPG), 9-[2-(phosphonomethoxy)propyl]adenine (PMPA), (Table 6), compound 2 was found to enhance the anti-HIV-1 activity of all these drugs. Therefore, the present invention refers to a pharmaceutical composition comprising a compound of the present invention, 5 preferentially compound 2, in combination with antiretroviral drugs such as dideoxynucleosides or acyclic phosphonate nucleosides for the AIDS therapy. In conclusion, combinations of compound 2 with ddI, PMEa, PMPG or PMPA appear to be promising in particular for the therapy of AIDS patients with or without AIDS-associated neoplasias.

Table 5. Susceptibility to other anticancer drugs of cells resistant to compound 2.

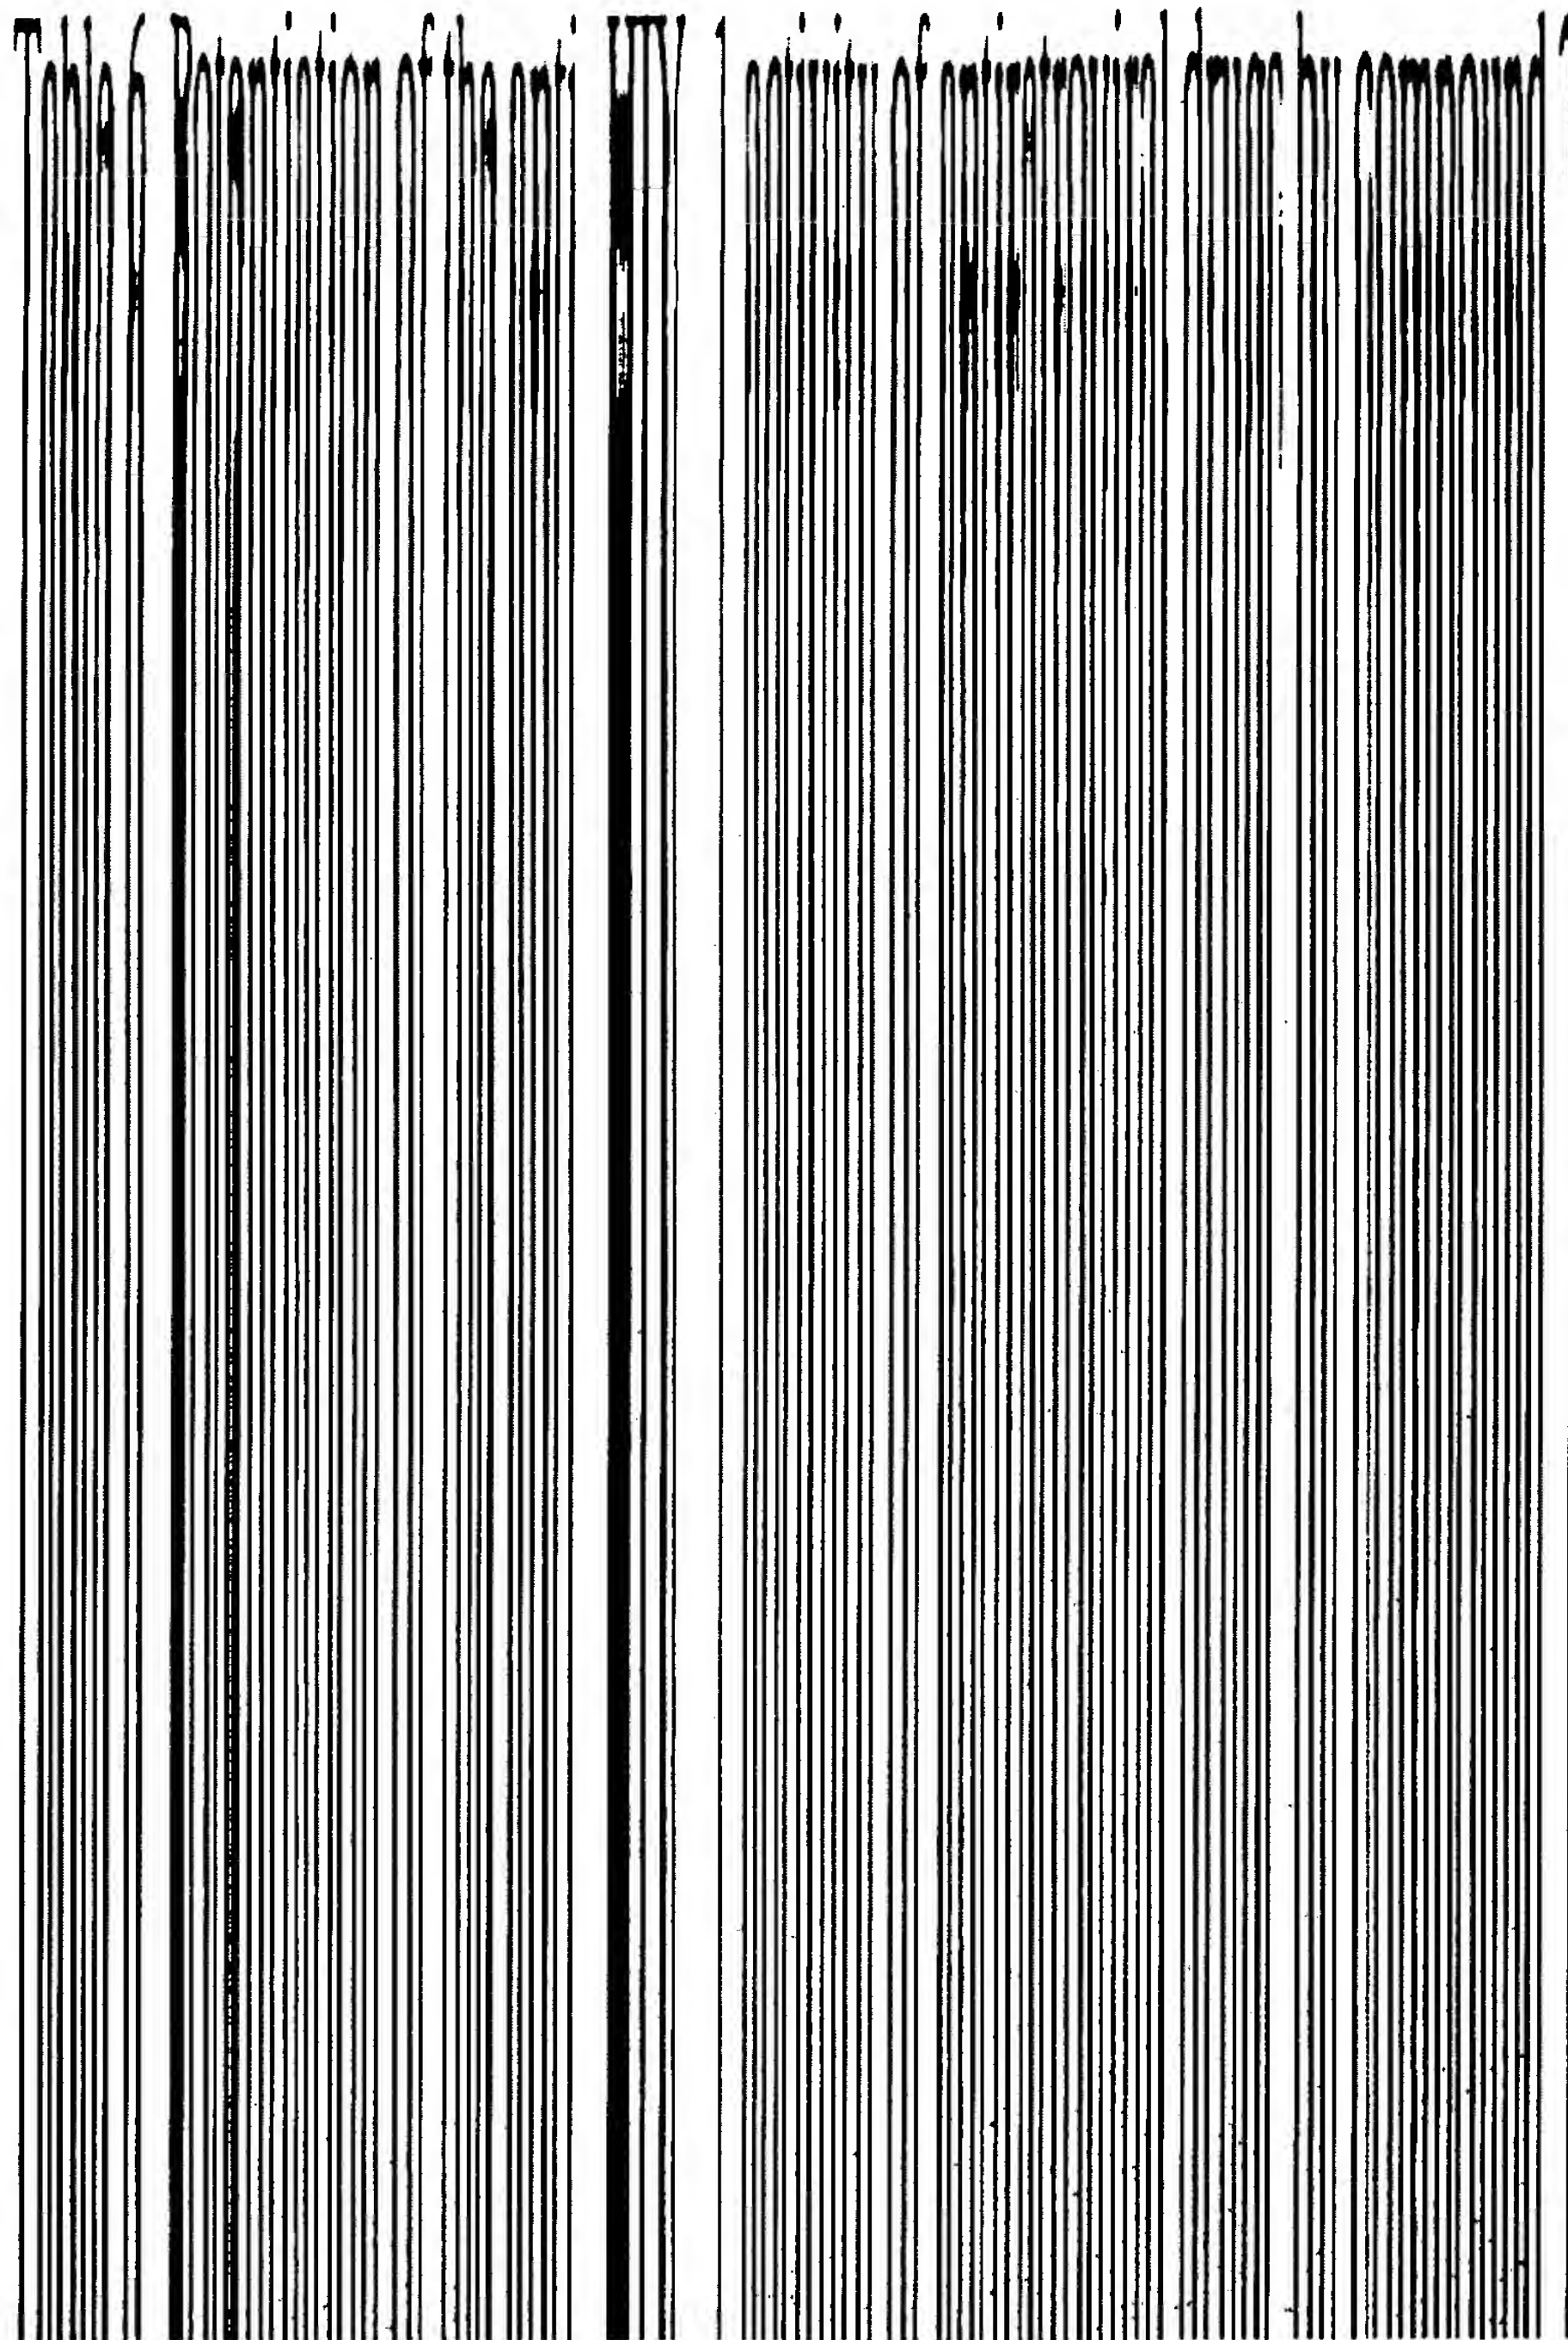

| Compound      | <sup>a</sup> IC <sub>50</sub> [ $\mu$ M] |                      |
|---------------|--|----------------------|
|               | ACHN                                     | <sup>b</sup> ACHN/R1 |

|               |  |                      |
| MTX           | 0.08 ( $\pm$ 0.05)                       | 0.07 ( $\pm$ 0.06)   |
|               |  |                      |
| Cis-Pt.       | 5.0 ( $\pm$ 0.8)                         | 3.2 ( $\pm$ 0.5)     |
|               |  |                      |
| Doxorubicin   | 0.13 ( $\pm$ 0.05)                       | 0.12 ( $\pm$ 0.08)   |
|               |  |                      |
| Taxol         | 0.16 ( $\pm$ 0.09)                       | 0.1 ( $\pm$ 0.04)    |

<sup>a</sup>Inhibitory concentration fifty: compound concentration ( $\pm$  SD) required to reduce cell multiplication by 50% under conditions allowing untreated controls to undergo at least three consecutive multiplication rounds.

<sup>b</sup>Cell subclone resistant to compound 2 established by cultivation of ACHN cells in medium containing stepwise increasing concentrations of this drug.

Compounds of formula (I), namely 2, 4 and 8 were evaluated for their antiviral activity against HSV-1, HSV-2, Vaccinia, Vesicular stomatitis virus and Coxsackie B2, but none of them resulted active at concentrations as high as 300  $\mu$ M (data not shown). However, when tested in

combination with acyclovir (ACG), 9-[2-(phosphonomethoxy)ethyl]guanine (PMEG) and adenine arabinoside (araA), compound 2 was found to enhance the anti-HSV-1 activity of these drugs (Table 7).

Efficacy of compound 2 on Kaposi's-like lesions induced in mice. The fact that 2 enhances the anti-HIV-1 activity of ddI, ddA, PMPG and PMPA (13) makes the pyrazole nucleoside a promising candidate for the treatment of AIDS-related neoplasias. To obtain further information on its antitumor efficacy in vivo, compound 2 was tested in a murine model of Kaposi's sarcoma, in which lesions carrying all the phenotypic hallmarks of KS are readily induced by cell-free supernatants of KS cell cultures (KS<sub>sup</sub>) (25). In this model, co-injection of 4, 2 and 1 mg/kg of compound 2 with the KS<sub>sup</sub>/heparin/Matrigel mixture resulted in over 80% inhibition of the angiogenic response, as measured by the haemoglobin content of Matrigel implants (Table 7). Surprisingly, doxorubicin, used as reference drug, did not affect the KS<sub>sup</sub>-induced angiogenic process at 1.5 mg/kg.

Table 7. Potentiation of the anti-HSV-1 activity of antiherpes drugs by compound 2.

| Treatment                          | *PFU/mL             |                      |

<sup>a</sup>KS<sub>sup</sub>: cell-free supernatant from Kaposi's cell cultures.

<sup>b</sup>The range of haemoglobin content in control Matrigel implants was 0.681 – 2.033.

<sup>c</sup> Values below 0.400 were considered negative.

### SYNTHETIC EXAMPLES

- 5 Preparation of the compounds of the invention might become more understandable on the basis of the Examples reported below.

Reaction steps and product mixtures were routinely monitored by thin-layer chromatography (TLC) on silica gel precoated F254 Merck plates with detection under 254 nm UV lamp and/or by spraying with 10% H<sub>2</sub>SO<sub>4</sub>.MeOH or 5% KMnO<sub>4</sub>/H<sub>2</sub>O and heating. Column chromatographies were performed with Merck 60–200 mesh silica gel. Ionic exchange resins used were: Sephadex-DEAE, 25-A. NH<sub>4</sub><sup>+</sup> form and Dowex 50Wx2–200. Na<sup>+</sup> form. Nuclear magnetic resonance (<sup>1</sup>H-NMR and <sup>13</sup>C-NMR) spectra were determined for solution in CDCl<sub>3</sub>-DMSO-*d*<sub>6</sub> on a Bruker AC-200 spectrometer and peak positions are given in parts

per million (d) downfield from tetramethylsilane as internal standard. Melting points were obtained in open capillary tubes and are uncorrected. All drying operations were performed over anhydrous magnesium sulphate. Ultraviolet spectra were recorded on a Jasco 510 spectrometer. Analytical HPLC was performed on a Waters 600E instrument on Rainin C18 (Dynamax 12m) and Knauer silica gel (Eurospher 100, 5m) columns. Room temperature was 22–25°C. Microanalyses, unless indicated, were in agreement with the calculated values within  $\pm 0.4\%$

#### Example 1

**Preparation of methyl 4-iodo-1- $\beta$ -D-ribofuranosyl-pyrazole-3-carboxylate (2).** A solution of sodium methoxide (sodium, 0.061 g, 2.6 mmol, in dry methanol, 20 mL) was added at 0°C to a solution of compound 1 (0.5 g, 0.76 mmol) in dry methanol (20 mL). Compound 1 was previously obtained as reported by Manfredini *et al.* (J. Med. Chem., 1992, 35, 917–924). After 1 h TLC (CH<sub>2</sub>Cl<sub>2</sub>/MeOH, 9/1) indicated complete reaction. The mixture was then neutralized with Dowex (50W H<sup>+</sup>), filtered and the pad was washed with methanol (3 x 50 mL). After evaporation, the crude oil was purified by column chromatography (CH<sub>2</sub>Cl<sub>2</sub>/MeOH, 9/1).

2: syrup; yield 75%; UV (MeOH) nm  $\lambda_{\max}$  205 (e 17200), 254 (e 29300);  $\lambda_{\text{shoulder}}$  219 (e 7000);  $\lambda_{\min}$  241 (e 2500); <sup>1</sup>H NMR, (DMSO-*d*<sub>6</sub>)  $\delta$  3.50 (m, 2H, H5',5''); 3.80 (s, 3H, OMe); 3.91 (m, 1H, H4'); 4.11 (m, 1H, H3'); 4.27 (m, 1H, H2'); 5.00 (t, 1H, J = 5.5 Hz, OH); 5.20 (d, 1H, J = 5.4 Hz, OH); 5.60 (d, 1H, J = 5.8 Hz, OH); 5.68 (d, 1H, J = 4.4 Hz, H1'); 8.36 (s, 1H, H5).

#### Example 2

**Preparation of methyl 1-(2,3,5-tri-O-benzoyl- $\beta$ -D-ribofuranosyl)-4-[2-(trimethylsilyl)-ethynyl]pyrazole-3-carboxylate (3).** Freshly distilled dry Et<sub>3</sub>N (15 mL) was vigorously purged with argon for 15 min, and the iodo-derivative 1 (0.3 g, 0.45 mmol) was added followed by (trimethylsilyl)acetylene (0.15 mL, 1 mmol), (Ph<sub>3</sub>P)<sub>2</sub>PdCl<sub>2</sub> (0.007 g, 0.016 mmol), and CuI (0.0035 g, 0.018 mmol). This suspension was first stirred at room temperature for 1 h and then at 80°C for 2 h under positive argon pressure (TLC, EtOAc/Hexane, 3:7). After 5 h TLC indicated complete reaction, the solvent was evaporated, the brown residue was dissolved in dichloromethane (100 mL), washed with 2% disodium EDTA H<sub>2</sub>O (2 x 50 mL) and H<sub>2</sub>O (2 x 50 mL), dried and concentrated to dryness. The

resulting brown oil was purified by chromatography (EtOAc/ Hexane, 3:7 in presence of Et<sub>3</sub>N). Appropriate fractions were evaporated to give 3 as a yellow solid.

3: mp 68°C; yield 91 %; <sup>1</sup>H NMR (CDCl<sub>3</sub>) δ 0.29 (s, 9H, SiMe<sub>3</sub>); 3.94 (s, 3H, OMe); 4.58 (dd, 1H, J = 12 e 5 Hz, H5'); 4.82 (m, 2H, H4', H5''); 6.00 (dd, 1H, J = 10 e 3 Hz, H3'); 6.32 (dd, 1H, J = 5 e 3 Hz, H2'); 7.65 e 8.05 (m x 2, 17H, Ar, 1H', H5).

#### Example 3

**Preparation of 3-carboxyethylpyrazole-4-carboxaldehyde (intermediate 4).**

Ethylpyruvate semicarbazone (4.3 g, 25 mmol) was added, under stirring, to a mixture of phosphorus oxychloride (15 ml, 55 mmol) and dimethylformamide (13 mL, 110 mmol) previously prepared below 5°C. Starting ethylpyruvate semicarbazone (mp 216°C) was prepared by the standard procedure from semicarbazide and ethylpyruvate. The reaction mixture was heated at 60°C and 4 h later was cooled and poured into crushed ice (30 g). The mixture was then neutralized with sodium hydroxide (20 g/80 mL H<sub>2</sub>O), heated at 60°C for 5 min, cooled and acidified to pH 6 with 1N HCl. The precipitated solid was filtered off and recrystallized from ethanol.

4: mp 167-168°C; yield 83%; <sup>1</sup>H NMR. CDCl<sub>3</sub>: 1.32 (t, 3H, J=7 Hz, Ethyl); 4.34 (q, 2H, Ethyl); 8.49 (s, 1H, H5); 10.20 (s, 1H, CHO); 11.20 (sbr, 1H, H1).

#### Example 4

**Preparation of ethyl 1-(β-D-2',3',5'-tri-O-benzoyl-ribofuranosyl)-4-formylpyrazole-3-carboxylate (5).** Hexamethyldisilazane (1.15 mL, 5.5 mmol) and a catalytic amount of ammonium sulphate were added, under positive Argon pressure, to a mixture of 4 (0.84 g, 5 mmol) and 1-O-acetyl-2,3,5-tri-O-benzoyl-β-D-ribofuranose (3.8 g, 7.5 mmol) in 50 mL of freshly dry distilled acetonitrile. The mixture was heated at reflux condition, with the exclusion of moisture, until complete dissolution and then trimethylsilyl chloride (0.75 mL, 6 mmol) and trifluoromethane sulfonic acid (1.05 mL, 12 mmol) were added. Reaction course was monitored with TLC (EtOAc/Hexane). After 3 h the reaction mixture was cooled to ambient temperature, diluted with dichloromethane (50 mL) and extracted with a saturated NaHCO<sub>3</sub>/H<sub>2</sub>O solution. The aqueous phase was then extracted with dichloromethane (2 x 50 mL) and the organic layer was washed with a saturated NaCl/H<sub>2</sub>O solution, dried and evaporated. The residue was purified by column chromatography (EtOAc/Hexane, 3/7).

5: Syrup; yield 63%;  $^1\text{H}$  NMR ( $\text{CDCl}_3$ )  $\delta$  1.32 (t, 3H,  $J = 7$  Hz, Ethyl); 4.34 (q, 2H, Ethyl); 4.65 (dd, 1H,  $J = 12$  and 5 Hz,  $\text{H}5'$ ); 4.84 (m, 2H,  $\text{H}4'$ ,  $\text{H}5''$ ); 6.15 (m, 2H,  $\text{H}2'$ ,  $\text{H}3'$ ); 7.46–8.15 (m, 16H, Ar,  $\text{H}1'$ ); 8.25 (s, 1H,  $\text{H}5$ ); 10.40 (s, 1H, CHO).

#### Example 5

- 5 Preparation of ethyl 1-( $\beta$ -D-2',3',5'-tri-O-benzoyl-ribofuranosyl)-4-(1-hydroxy-2-nitro)ethyl-pyrazole-3-carboxylate (6).  $\text{Al}_2\text{O}_3$  (Fluka: type 507 C neutral, 1 g, 9.8 mmol) was added, under argon atmosphere at  $0^\circ\text{C}$ , to a solution of 5 (1.2 g, 2 mmol) in nitromethane (0.12 mL, 2.2 mmol). After 12h at room temperature, the mixture was diluted with  $\text{CH}_2\text{Cl}_2$  (50 mL) filtered and concentrated to dryness to give an oil which was purified by column chromatography (EtOAc/Hexane, 1/1 in presence of  $\text{Et}_3\text{N}$ ).

6: syrup; yield 65%;  $^1\text{H}$  NMR ( $\text{CDCl}_3$ )  $\delta$  1.42 (t, 3H,  $J = 7$  Hz, Ethyl); 4.47 (q, 2H, Ethyl); 4.60 (dd, 1H,  $J = 12$  and 5 Hz,  $\text{H}5'$ ); 4.67 (m, 3H, OH,  $-\text{CH}_2\text{NO}_2$ ); 4.84 (m, 2H,  $\text{H}4'$ ,  $\text{H}5''$ ); 5.62 (m, 1H,  $-\text{CHOH}-$ ); 6.12 (m, 2H,  $\text{H}2'$ ,  $\text{H}3'$ ); 7.70 (m, 17H, Ar,  $\text{H}1'$ ,  $\text{H}5$ )

#### Example 6

- 15 Preparation of (E) and (Z) ethyl 1-( $\beta$ -D-2',3',5'-tri-O-benzoyl-ribofuranosyl)-4-(2-carboxyethyl)vinyl-pyrazole-3-carboxylate (7a). The solution of carboxyethylmethylene phosphorane (0.62 g, 1.8 mmol) and 5 (0.92 g, 1.5 mmol) in dry toluene (10 mL) was refluxed under argon atmosphere until complete reaction (TLC: EtOAc/Hexane, 3/7). The mixture was evaporated in vacuo to give a crude oil which was purified by column chromatography (EtOAc/Hexane, 3/7). Evaporation of the appropriate fractions gave the expected products.

7a (E): syrup, yield 73%;  $^1\text{H}$  NMR ( $\text{CDCl}_3$ )  $\delta$  1.30 (m, 6H, Ethyl); 4.20 (q, 2H,  $J = 7$  Hz, Ethyl); 4.50 (q, 2H,  $J = 7$  Hz, Ethyl); 4.63 (dd, 1H,  $J = 12$  and 5 Hz,  $\text{H}5'$ ); 4.81 (m, 2H,  $\text{H}4'$ ,  $\text{H}5''$ ); 6.18 (m, 2H,  $\text{H}2'$ ,  $\text{H}3'$ ); 6.36 (d, 1H,  $J = 16$  Hz, vinyl); 7.80 (m, 16H, Ar,  $\text{H}1'$ ); 8.12 (d, 1H,  $J = 16$  Hz, vinyl); 8.17 (s, 1H,  $\text{H}5$ ).

- 25 7a (Z): syrup, yield 5%;  $^1\text{H}$  NMR ( $\text{CDCl}_3$ )  $\delta$  1.30 (m, 6H,  $J = 7$  Hz, Ethyl); 4.20 (q, 2H,  $J = 7$  Hz, Ethyl); 4.50 (q, 2H,  $J = 7$  Hz, Ethyl); 4.60 (dd, 1H,  $J = 12$  and 5 Hz,  $\text{H}5'$ ); 4.83 (m, 2H,  $\text{H}4'$ ,  $\text{H}5''$ ); 5.91 (d, 1H,  $J = 12$  Hz, vinyl); 6.18 (m, 2H,  $\text{H}2'$ ,  $\text{H}3'$ ); 7.61 (d, 1H,  $J = 12$  Hz, vinyl); 7.80 (m, 16H, Ar,  $\text{H}1'$ ); 8.89 (s, 1H,  $\text{H}5$ ).

#### Example 7

- 30 Preparation of (E) and (Z) ethyl 1-( $\beta$ -D-2',3',5'-tri-O-benzoyl-ribofuranosyl)-4-vinyl and -4-(2-bromo)-vinyl-pyrazole-3-carboxylate (7b,c).  $n\text{BuLi}$  1.6 M (2.3 mL, 3.65 mmol) was added, under argon atmosphere at  $0^\circ\text{C}$ , to a solution of the appropriate

triphenylphosphonium bromide derivative (3.1 mmol) in dry THF (10 mL). 1h later, a solution of 5 (1.2 g, 2 mmol) in dry THF (10 mL) was added and the red mixture stirred for additional 2h. TLC analysis (EtOAc/Hexane, 1/1) evidenced complete reaction. The mixture was poured into crushed ice (50 g), extracted with EtOAc (3 x 50 mL), dried and concentrated to dryness to give a crude oil which was purified by column chromatography (EtOAc/Hexane, 1/1). Evaporation of the appropriate fractions gave the expected products.

7b: syrup; yield 53%; <sup>1</sup>H NMR (CDCl<sub>3</sub>) δ 1.42 (t, 6H, J = 7 Hz, Ethyl); 4.30 (q, 2H, Ethyl); 4.62 (dd, 1H, J = 12 and 5 Hz, H5'); 4.84 (m, 2H, H4', H5''); 5.23 (dd, 1H, J = 1.4 Hz, 11 Hz, vinyl); 5.54 (dd, 1H, J = 1.4 Hz, 18 Hz, vinyl); 6.09 (m, 2H, H2', H3'); 7.11 (dd, 1H, J = 11 Hz, 18 Hz, vinyl); 7.88 (m, 17H, Ar, H1', H5).

7c(E)+(Z): syrup; yield 35%; <sup>1</sup>H NMR (CDCl<sub>3</sub>) δ 1.40 (m, 12H, Ethyl); 4.32 (m, 4H, Ethyl); 4.60 (m, 2H, H5'); 4.82 (m, 4H, H4', H5''); 6.12 (m, 4H, H2', H3'); 6.69 (d, 1H, J = 8 Hz, (Z)-vinyl); 6.69 (d, 1H, J = 14 Hz, (E)-vinyl); 7.85 (m, 36H, Ar, H1', H5, (E)-vinyl, (Z)-vinyl).

#### Example 8

15 Preparation of (E) ethyl 1-(β-D-2',3',5'-tri-O-benzoyl-ribofuranosyl)-4-(2-nitro)vinyl-pyrazole-3-carboxylate (7d). The nitro derivative 6 (0.86 g, 1.3 mmol) was dissolved in dry CH<sub>2</sub>Cl<sub>2</sub> (10 mL) at 0°C and CH<sub>3</sub>SO<sub>2</sub>Cl (0.2 mL, 2.6 mmol) was added followed by Et<sub>3</sub>N (0.36 mL, 2.6 mmol) drop to drop. After 2 h at room temperature TLC (EtOAc/Hexane, 3/7) indicated complete reaction. The reaction mixture was diluted with 20 CH<sub>2</sub>Cl<sub>2</sub> (50 mL), washed with water (50 mL), 10% citric acid/H<sub>2</sub>O (50 mL), water (50 mL) dried and concentrated to dryness to give a residue which was purified by column chromatography (EtOAc/Hexane, 3/7).

7d: syrup; yield 64%; <sup>1</sup>H NMR (CDCl<sub>3</sub>) δ 1.44 (t, 3H, J = 7 Hz, Ethyl); 4.47 (q, 2H, Ethyl); 4.60 (dd, 1H, J = 12 and 5 Hz, H5'); 4.81 (m, 2H, H4', H5''); 6.15 (m, 2H, H2', H3'); 7.66 (d, 25 1H, J = 14 Hz, vinyl); 7.80 (m, 17H, Ar, 1-H', H5); 8.46 (d, 1H, J = 14 Hz, vinyl).

#### Example 9

Preparation of 1-tetrahydropyranyl-3-carboxyethylpyrazoles 9 and 10. The starting pyrazoles 8 and 4 (5 mmol) and pTSH x H<sub>2</sub>O (0.1 g, 0.5 mmol) were dissolved in CHCl<sub>3</sub> (20 mL) and dihydropyran (DHP, 0.63 mL, 6 mmol) was slowly added at 0°C. After 15 min, the 30 reaction mixture was let to reach room temperature and stirred for an additional 3h (EtOAc/Hexane, 1/1). After this time the mixture was washed with saturated NaHCO<sub>3</sub>/H<sub>2</sub>O solution (20 mL), water (2 x 20 mL) and the organic phase was anhydriified and evaporated in

vacuo to give a crude oil which was purified by column chromatography (EtOAc/Hexane, 4/6).

9: oil; yield 83%;  $^1\text{H}$  NMR,  $\text{CDCl}_3$ : 1.32 (t, 3H,  $J = 7$  Hz, Ethyl); 1.60–2.20 (m, 6H, THP); 3.50 (m, 1H, THP); 4.10 (m, 1H, THP); 4.34 (q, 2H, Ethyl); 5.47 (dd, 1H,  $J = 2.8$  Hz, 12.8 Hz, THP); 7.78 (s, 1H, H5).

10: oil; yield 63%;  $^1\text{H}$  NMR,  $\text{CDCl}_3$ : 1.32 (t, 3H,  $J = 7$  Hz, Ethyl); 1.60–2.20 (m, 6H, THP); 3.50 (m, 1H, THP); 4.10 (m, 1H, THP); 4.34 (q, 2H, Ethyl); 5.49 (dd, 1H,  $J = 2.8$  Hz, 12.8 Hz, THP); 8.25 (s, 1H, H5); 10.40 (s, 1H, CHO).

#### Example 10

- 10 Preparation of 1-tetrahydropyranyl-3-carboxyethyl-4-[2-(trimethylsilyl)ethynyl]pyrazole (11). Freshly distilled anhydrous  $\text{Et}_3\text{N}$  (20 mL) was vigorously purged with argon for 15 min, and halide 9 (0.46 g, 1.3 mmol) was added followed by (trimethylsilyl)acetylene (0.23 mL, 1.5 mmol),  $(\text{Ph}_3\text{P})_2\text{PdCl}_2$  (0.010 g, 0.023 mmol), and  $\text{CuI}$  (0.0053 g, 0.027 mmol). This suspension was stirred at room temperature for 1 h and then at 60° C for 2 h under positive argon pressure (TLC, EtOAc/ Hexane, 3:7). When the reaction was completed, the solvent was evaporated, the brown residue was dissolved in dichloromethane (100 mL), washed with 2% disodium EDTA/ $\text{H}_2\text{O}$  (2 x 50 mL) and  $\text{H}_2\text{O}$  (2 x 50 mL), dried, and evaporated. The resulting brown oil was purified by chromatography (EtOAc/ Hexane, 3:7 in presence of traces of  $\text{Et}_3\text{N}$ ). Appropriate fractions were evaporated to give 11 as a yellow oil.
- 15 11: oil; yield 93%;  $^1\text{H}$  NMR,  $\text{CDCl}_3$ : 0.24 (s, 9H,  $\text{SiMe}_3$ ); 1.32 (t, 3H,  $J = 7$  Hz, Ethyl); 1.60–2.20 (m, 6H, THP); 3.50 (m, 1H, THP); 4.10 (m, 1H, THP); 4.34 (q, 2H, Ethyl); 5.45 (dd, 1H,  $J = 2.8$  Hz, 12.8 Hz, THP); 7.85 (s, 1H, H5).

#### Example 11

- 1-tetrahydropyranyl-3-carboxyethyl-4-ethynyl-pyrazole (12). Compound 11 (0.115 g, 0.36 mmol) was dissolved in 20 mL of anhydrous THF and TBAF (0.114 g, 0.36 mmol) was added under stirring at room temperature. After 1h TLC (EtOAc/ Hexane, 3:7) indicated complete reaction, the mixture was evaporated to dryness and the residue brown oil was purified by column chromatography (EtOAc/ Hexane, 3:7). Evaporation of appropriate fractions gave a yellow oil.
- 25 12: oil; yield 90%;  $^1\text{H}$  NMR,  $\text{CDCl}_3$ : 1.32 (t, 3H,  $J = 7$  Hz, Ethyl); 1.60–2.20 (m, 6H, THP); 3.22 (s, 1H, Ethynyl); 3.52 (m, 1H, THP); 4.10 (m, 1H, THP); 4.44 (q, 2H, Ethyl); 5.47 (dd, 1H,  $J = 2.8$  Hz, 12.8 Hz, THP); 7.87 (s, 1H, H5).

Example 12

Preparation of 1-tetrahydropyranyl-3-carboxyethyl-4-(1-hydroxy-2-nitro)ethyl pyrazole (13).

Al<sub>2</sub>O<sub>3</sub> (Fluka: typ 507 C neutral, 1 g, 9.8 mmol) was added, under argon atmosphere at 0°C. to  
5 a solution of 10 (0.5 g, 2 mmol) in nitromethane (0.12 mL, 2.2 mmol). After 12h at room temperature, the mixture was diluted with CH<sub>2</sub>Cl<sub>2</sub> (50 mL), filtered and evaporated in vacuo to give an oil which was purified by column chromatography (EtOAc/Hexane, 1/1).

13: oil; yield 65%; <sup>1</sup>H NMR, CDCl<sub>3</sub>: 1.42 (t, 3H, J=7 Hz, Ethyl); 1.60–2.20 (m, 6H, THP);  
3.50 (m, 1H, THP); 4.10 (m, 1H, THP); 4.47 (q, 2H, Ethyl); 4.67 (m, 3H, OH, –CH<sub>2</sub>NO<sub>2</sub>);  
10 5.49 (dd, 1H, J = 2.8 Hz, 12.8 Hz, THP); 5.62 (m, 1H, –CHOH–); 7.75 (s, 1H, H5).

Example 13

Preparation of 1-tetrahydropyranyl-3-carboxyethyl-4-(E)-(2-nitro)vinyl pyrazole  
(14a). The nitro derivative 13 (0.4 g, 1.3 mmol) was dissolved in CH<sub>2</sub>Cl<sub>2</sub> (10 mL) at 0°C and  
CH<sub>3</sub>SO<sub>2</sub>Cl (0.2 mL, 2.6 mmol) was added followed by TEA (0.36 mL, 2.6 mmol) drop to  
15 drop. After 2 h at room temperature TLC (EtOAc/Hexane, 3/7) indicated complete reaction.  
The reaction mixture was diluted with CH<sub>2</sub>Cl<sub>2</sub> (50 mL) washed with water (50 mL), 10%  
citric acid/H<sub>2</sub>O (50 mL), water (50 mL) anhydriified evaporated in vacuo to give a residue  
which was purified by column chromatography (EtOAc/Hexane, 3/7).

14a: mp 77–78°C; yield 86%; <sup>1</sup>H NMR, CDCl<sub>3</sub>: 1.44 (t, 3H, J=7 Hz, Ethyl); 1.60–2.20 (m,  
20 6H, THP); 3.70 (m, 1H, THP); 4.10 (m, 1H, THP); 4.47 (q, 2H, Ethyl); 5.49 (dd, 1H, J = 2.8  
Hz, 12.8 Hz, THP); 7.66 (d, 1H, J=14 Hz, vinyl); 8.46 (d, 1H, J=14 Hz, vinyl); 8.07 (s, 1H,  
H5).

Example 14

Preparation of (E) and (Z) 1-tetrahydropyranyl-3-carboxyethyl-4-(2-carboxyethyl)vinyl  
25 pyrazole (14b). A solution of carboxyethylmethylene phosphorane (0.62 g, 1.8 mmol) and the  
aldehyde 5 (0.37 g, 1.5 mmol) in anhydrous toluene (10 mL) under argon atmosphere was  
heated at reflux conditions until complete reaction (TLC: EtOAc/Hexane, 3/7). The mixture  
was evaporated in vacuo to give a crude oil which was purified by column chromatography  
(EtOAc/Hexane, 3/7). Evaporation of the appropriate fractions gave the expected product.

30 14b (E): oil, yield 73%; <sup>1</sup>H NMR, CDCl<sub>3</sub>: 1.30 (m, 6H, Ethyl); 1.70–2.0 (m, 6H, THP); 3.70  
(m, 1H, THP); 4.10–4.30 (m, 1H, THP; m, 2H, Ethyl); 4.50 (q, 2H, J=7 Hz, Ethyl); 5.50 (dd,

1H, J = 2.8 Hz, 12.8 Hz, THP); 6.36 (d, 1H, J = 16 Hz, vinyl); 8.12 (d, 1H, J = 16 Hz, vinyl); 8.17 (s, 1H, H5).

14b (Z): oil, yield 5%; <sup>1</sup>H NMR, CDCl<sub>3</sub>: 1.30 (m, 6H, J=7 Hz, Ethyl); 1.70–2.0 (m, 6H, THP); 3.70 (m, 1H, THP); 4.10–4.30 (m, 1H, THP; m, 2H, Ethyl); 4.50 (q, 2H, J=7 Hz, Ethyl); 5.50 (dd, 1H, J = 2.8 Hz, 12.8 Hz, THP); 5.91 (d, 1H, J = 12 Hz, vinyl); 7.61 (d, 1H, J = 12 Hz, vinyl); 8.89 (s, 1H, H5).

#### Example 15

**Preparation of 1-tetrahydropyranyl-3-carboxyethyl-4-vinyl and -(2-bromo)vinyl pyrazole (14c,d).** nBuLi 1.6 M (4.6 mL, 7.3 mmol) was added, under argon atmosphere at 0°C, to a solution of the appropriate triphenylphosphonium bromide derivative (6.2 mmol) in anhydrous THF (10 mL). After 1h, the aldehyde 5 (1 g, 4 mmol) was added and the red solution was stirred for additional 2 h. TLC analysis (EtOAc/Hexane, 1/1) evidenced complete reaction. The mixture was poured into crushed ice (100 g), extracted with EtOAc (3 x 50 mL), anhydriified and evaporated in vacuo to give a crude oil which was purified by column chromatography. Evaporation of the appropriate fractions gave the expected products:

14c: oil; yield 62%; <sup>1</sup>H NMR, CDCl<sub>3</sub>: 1.40 (t, 6H, J=7 Hz, Ethyl); 1.70–2.0 (m, 6H, THP); 3.70 (m, 1H, THP); 4.10 (m, 1H, THP); 4.30 (q, 2H, Ethyl); 5.21 (dd, 1H, J = 1.4 Hz, 11 Hz, vinyl); 5.48 (dd, 1H, J = 2.8 Hz, 12.8 Hz, THP); 5.54 (dd, 1H, J = 1.4 Hz, 18 Hz, vinyl); 7.11 (dd, 1H, J = 11 Hz, 18 Hz); 7.83 (s, 1H, H5).

14d: oil; yield 50%; (E) + (Z) mixture: yield 50%; <sup>1</sup>H NMR, CDCl<sub>3</sub>: 1.40 (m, 6H, Ethyl); 1.70–2.0 (m, 12H, THP); 3.70 (m, 2H, THP); 4.10 (m, 2H, THP); 4.41 (m, 4H, Ethyl); 5.49 (m, 2H, THP); 6.38 (d, 1H, J = 8 Hz, (Z)-vinyl); 6.69 (d, 1H, J = 14 Hz, (E)-vinyl); 7.52 (d, 1H, J = 14 Hz, (E)-vinyl); 7.80 (d, 1H, J = 8 Hz, (Z)-vinyl); 7.19 (s, 1H, H5, (Z)-isomer); 7.61 (s, 1H, H5, (E)-isomer).

#### Example 16

**Synthesis of 1-β-D-ribofuranosyl-4-ethynyl-pyrazole-3-carboxamide (15).** Compound 3 (0.2 g, 0.317 mmol) was dissolved at 4°C in 20 mL of methanolic ammonia (saturated at -15°C) and let to stir, in a firmly capped flask, at 4°C for 24 h. After this time TLC (CH<sub>2</sub>Cl<sub>2</sub>/MeOH, 8/2) indicated complete reaction and the mixture was evaporated to dryness. The residue was treated with ether (3 X 50 mL) and the insoluble gum was purified by column chromatography (CH<sub>2</sub>Cl<sub>2</sub>/MeOH, 8/2). Evaporation of the appropriate fractions gave a yellow syrup.

15: syrup; yield 82%; UV (MeOH) nm  $\lambda_{\max}$  207 (e 16300), 230 (e 7000);  $\lambda_{\text{shoulder}}$  254 (e 3000);  $\lambda_{\min}$  221 (e 6500);  $^1\text{H}$  NMR, (DMSO- $d_6$ )  $\delta$  3.30–3.60 (m, 2H, H5',5''); 3.90 (m, 1H, H4'); 4.20 (m, 1H, H3'); 4.35 (m, 1H, H2'); 5.02 (s, 1H, ethynyl); 5.05 (t, 1H, J = 5.5 Hz, OH); 5.24 (d, 1H, J = 5.4 Hz, OH); 5.52 (d, 1H, J = 5.8 Hz, OH); 5.66 (d, 1H, J = 4.3 Hz, H1'); 7.20 (br s, 1H, CONH<sub>2</sub>); 7.40 (br s, 1H, CONH<sub>2</sub>); 8.23 (s, 1H, H5).

#### Example 17

General procedure for deprotection of derivatives 5, 7a–d. The removal of protective benzoyl groups of compounds 5, 7a–d (2.5 mmol) was carried out as described for compound 15. After the usual work-up, the residue was purified by column chromatography (CH<sub>2</sub>Cl<sub>2</sub>/MeOH, 8/2). The solid products were crystallized by methanol with diffusion of Et<sub>2</sub>O.

16: white solid; yield 83%; mp 107°C; UV (MeOH) nm  $\lambda_{\max}$  209 (e 14900), 245 (e 7000);  $\lambda_{\min}$  233 (e 6900), 200 (e 8400);  $^1\text{H}$  NMR, (DMSO- $d_6$ )  $\delta$  3.52 (m, 2H, H5',5''); 3.94 (m, 1H, H4'); 4.14 (m, 1H, H3'); 4.33 (m, 1H, H2'); 4.99 (t, 1H, J = 5.5 Hz, OH); 5.18 (d, 1H, J = 5.4 Hz, OH); 5.58 (d, 1H, J = 5.8 Hz, OH); 5.74 (d, 1H, J = 4.0 Hz, H1'); 7.68 (sbr, 1H, CONH<sub>2</sub>); 7.94 (sbr, 1H, CONH<sub>2</sub>); 8.73 (s, 1H, H5); 10.2 (s, 1H, CHO).

17a: pale yellow solid; yield 77%; mp 97–98°C; UV (MeOH) nm  $\lambda_{\max}$  204 (e 15300), 285 (e 16500);  $\lambda_{\text{shoulder}}$  224 (e 12200),  $\lambda_{\min}$  247 (e 7300);  $^1\text{H}$  NMR, (DMSO- $d_6$ )  $\delta$  1.23 (t, 3H, J = 7 Hz, Ethyl); 3.52 (m, 2H, H5',5''); 3.94 (m, 1H, H4'); 4.15 (q, 2H, Ethyl); 4.17 (m, 1H, H3'); 4.33 (m, 1H, H2'); 4.92 (t, 1H, J = 5.5 Hz, OH); 5.13 (d, 1H, J = 5.4 Hz, OH); 5.50 (d, 1H, J = 5.8 Hz, OH); 5.64 (d, 1H, J = 4.4 Hz, H1'); 6.43 (d, 1H, J = 16 Hz, vinyl); 7.43 (sbr, 1H, CONH<sub>2</sub>); 7.59 (sbr, 1H, CONH<sub>2</sub>); 8.10 (d, 1H, J = 16 Hz, vinyl); 8.65 (s, 1H, H5).

17b: syrup; yield 68%; UV (MeOH) nm  $\lambda_{\max}$  213 (e 10800), 244 (e 8000);  $\lambda_{\min}$  235 (e 7900), 200 (e 8400);  $^1\text{H}$  NMR, (DMSO- $d_6$ )  $\delta$  3.52 (m, 2H, H5',5''); 3.90 (m, 1H, H4'); 4.17 (m, 1H, H3'); 4.33 (m, 1H, H2'); 4.97 (t, 1H, J = 5.5 Hz, OH); 5.14 (d, 1H, J = 5.4 Hz, OH); 5.29 (dd, 1H, J = 1.4 Hz, 11 Hz, vinyl); 5.55 (d, 1H, J = 5.8 Hz, OH); 5.66 (dd, 1H, J = 1.4 Hz, 18 Hz, vinyl); 5.76 (d, 1H, J = 4.4 Hz, H1'); 7.11 (dd, 1H, J = 11 Hz, 18 Hz, vinyl); 7.40 (sbr, 1H, CONH<sub>2</sub>); 7.60 (sbr, 1H, CONH<sub>2</sub>); 8.87 (s, 1H, H5).

17c (Z): mp 67°C; yield 32%; UV (MeOH) nm  $\lambda_{\max}$  232 (e 11000), 298 (e 10000);  $\lambda_{\text{shoulder}}$  345 (e 7500);  $\lambda_{\min}$  265 (e 8000);  $^1\text{H}$  NMR, (DMSO- $d_6$ )  $\delta$  3.50 (m, 2H, H5',5''); 3.92 (m, 1H, H4'); 4.15 (m, 1H, H3'); 4.30 (m, 1H, H2'); 4.96 (t, 1H, J = 5.5 Hz, OH); 5.15 (d, 1H, J = 5.4 Hz, OH); 5.53 (d, 1H, J = 5.8 Hz, OH); 5.75 (d, 1H, J = 4.4 Hz, H1'); 6.56 (d, 1H, J = 8 Hz,

#### 15 Example 18

**Preparation of 4-iodo-3-(3'-methyl-1',2',4'-oxadiazolyl)-1- $\beta$ -D-ribofuranosylpyrazole (18).** A mixture of acetamidoxime (0.244 g, 3.3 mmol), NaH (0.87 g, 3.63 mmol) and powdered molecular sieve (type 4 Å, 0.15 g) in dry THF (15 mL) was warmed at 60°C under argon atmosphere. After 1 h, a solution of 1 (0.25 g, 0.36 mmol) in dry THF (10 mL) was added and the mixture was refluxed for an additional 2 h. The mixture was then filtered and evaporated to dryness and the residue purified by column chromatography (CH<sub>2</sub>Cl<sub>2</sub>/MeOH, 9/1). Evaporation of the appropriate fractions gave compound 18 as a white powder.

18: yield 37%; UV (MeOH)  $\lambda_{\text{max}}$  205 (e 16400), 242 (e 8600);  $\lambda_{\text{shoulder}}$  270 (e 4500);  $\lambda_{\text{min}}$  227 (e 7000);  $^1\text{H}$  NMR, (DMSO- $d_6$ )  $\delta$  2.43 (s, 3H, Me); 3.50 (m, 2H, H5', 5''); 3.96 (m, 1H, H4'); 4.11 (m, 1H, H3'); 4.32 (m, 1H, H2'); 5.10 (t, 1H, J = 5.5 Hz, OH); 5.20 (d, 1H, J = 5.3 Hz, OH); 5.60 (d, 1H, J = 5.9 Hz, OH); 5.86 (d, 1H, J = 4.2 Hz, H1'); 8.50 (s, 1H, H5).

#### Example 19

**Preparation of 4-iodo-1- $\beta$ -D-ribofuranosylpyrazole-3-carboxylic acid (19).** A solution of 2 (0.264 g, 0.687 mmol) in 0.35 M NaOH (5 mL) was stirred at room temperature for 5 h. The solution was then neutralized with Dowex (50W H<sup>+</sup>), filtered and the pad washed with

water (3 x 5 mL). Evaporation to dryness of the collected fractions gave a yellow syrup which was crystallized from EtOH absolute to give a white solid.

19: yield 94%; mp 138–140 °C; UV (MeOH)  $\lambda_{\text{max}}$  205 (e 19400),  $\lambda_{\text{shoulder}}$  240 (e 6100);  $^1\text{H}$  NMR, (DMSO- $d_6$ )  $\delta$  3.50 (m, 2H, H5', 5'') ; 3.88 (m, 1H, H4'); 4.08 (m, 1H, H3'); 4.25 (m, 1H, H2'); 5.00 (br, 1H, OH); 5.30 (br, 1H, OH); 5.60 (br, 1H, OH); 5.69 (d, 1H, J = 4.2 Hz, H1'); 8.06 (s, 1H, H5); 10.00 (br, 1H, COOH).

#### Example 20

Preparation of methyl 1-(b-D-2',3',5'-tri-O-terbutyldimethylsilyl-ribofuranosyl)-4-iodo-pyrazole-3-carboxylate (20). TBDSCl (0.434 g, 2.74 mmol) imidazole (0.195 g, 2.74 mmol) and DMAP (0.015 gr, 0.13 mmol) were added, under argon atmosphere, to a solution of 2 (0.2 gr, 0.52 mmol) in dry DMF (5 mL). After 48 h at room temperature, the reaction was completed (TLC EtOAc/Hexane, 3/7). The mixture was evaporated to dryness and the residue purified by column chromatography (EtOAc/Hexane, 3/7) to give a pale yellow oil.

20: oil; yield 85%.  $^1\text{H}$  NMR ( $\text{CDCl}_3$ )  $\delta$  0.12–0.31 (6s, 18H, 6xSi-Me<sub>2</sub>); 0.98–1.11 (3s, 27H, Si-tBut); 3.90 (dd, 1H, J<sub>5'-5''</sub> = 11.6 Hz, J<sub>4'-5'</sub> = 2.3 Hz, H5''); 4.06 (dd, 1H, H5''); 4.08 (s, 3H, OMe); 4.24 (m, 1H, H4'); 4.35 (m, 1H, H3'); 4.51 (m, 1H, H2'); 5.96 (d, 1H, J = 4.8 Hz, H1'); 8.15 (s, 1H, H5).

#### Example 21

Preparation of butyl 4-iodo-1-b-D-ribofuranosylpyrazole-3-carboxylate (21). Dry butyl alcohol (0.25 mL, 0.19 g, 2.6 mmol) and 80% NaH (0.016 g, 0.066 mmol) were added to a solution of 20 (0.80 g, 0.11 mmol) in dry benzene (2 mL) and the mixture was stirred for 1 h at room temperature under argon atmosphere. The mixture was then diluted with EtOAc (5 mL) and then washed with cold 5% HCl (2 mL), dried and evaporated to dryness to give a crude residue in nearly quantitative yield. A sample of crude oil was purified by column chromatography (EtOAc/Hexane, 1/9).  $^1\text{H}$  NMR ( $\text{CDCl}_3$ )  $\delta$  0.11–0.28 (7s, 21H, 6xSi-Me<sub>2</sub> and Me); 0.97–1.08 (3s, 27H, Si-tBut); 1.59–1.90 (m, 4H, butyl); 3.85–4.10 (m, 2H, H5' and H5''); 4.22 (m, 1H, H4'); 4.35 (m, 1H, H3'); 4.50 (m, 3H, H2' and butyl); 5.94 (d, 1H, J = 4.8 Hz, H1'); 8.10 (s, 1H, H5).

The above described crude material (0.1 g) was dissolved in dry methanol (10 mL) and then glacial acetic acid (26 mL, 0.46 mmol), followed by  $\text{NH}_4\text{F}$  (0.058 g, 1.56 mmol), were added. The reaction mixture was heated at reflux conditions and under argon positive pressure for 12 h. After this time TLC ( $\text{CH}_2\text{Cl}_2/\text{MeOH}$ , 9/1) indicated complete reaction. The mixture was

evaporated to dryness and co-evaporated with EtOH (2 x 20 mL). The resulting residue was purified by column chromatography (CH<sub>2</sub>Cl<sub>2</sub>/MeOH, 9/1) to give a pale yellow syrup.

21: syrup; yield 85%. UV (MeOH)  $\lambda_{\text{max}}$  259 (e 3100),  $\lambda_{\text{min}}$  242 (e 2800); <sup>1</sup>H NMR, (CDCl<sub>3</sub>) d 0.94 (t, 3H, J = 7 Hz, butyl); 1.5 (m, 2H, butyl); 1.7 (m, 2H, butyl); 3.56 (m, 2H, H5', 5''); 4.2 (m, 1H, H4'); 4.31 (t, 2H, J = 6 Hz, butyl); 4.5 (m, 1H, H3'); 4.6 (br, 3H, H2', OH x 2); 5.00 (br, 1H, OH); 5.79 (d, 1H, J = 3.5 Hz, H1'); 7.84 (s, 1H, H5).

#### Example 22

**Preparation of 4-iodo-1-β-D-ribofuranosyl-pyrazole-3-carboxamide (22).** The protected compound 1 (0.5 g, 0.76 mmol) was dissolved in 20 mL of methanolic ammonia (saturated at -15 °C) and let to stir overnight in a firmly capped flask at 4 °C. After this time, TLC (CH<sub>2</sub>Cl<sub>2</sub>/MeOH, 9/1) indicated complete reaction and the mixture was evaporated to dryness. The residue was triturated with ether (3 x 20 mL) and the insoluble solid was purified by column chromatography (CH<sub>2</sub>Cl<sub>2</sub>/MeOH, 9/1). After evaporation of the appropriate fractions, the residue was crystallized by methanol with diffusion of Et<sub>2</sub>O.

22: solid, mp 181-184 °C; yield 74%; UV (MeOH) nm  $\lambda_{\text{max}}$  205 (e 14800), 257 (e 2800);  $\lambda_{\text{min}}$  246 (e 2700); <sup>1</sup>H NMR, (DMSO-d<sub>6</sub>) d 3.40-3.70 (m, 2H, H5', 5''); 3.92 (m, 1H, H4'); 4.11 (m, 1H, H3'); 4.31 (m, 1H, H2'); 4.95 (t, 1H, J = 5.5 Hz, OH); 5.14 (d, 1H, J = 5.4 Hz, OH); 5.49 (d, 1H, J = 5.8 Hz, OH); 5.65 (d, 1H, J = 4.3 Hz, H1'); 7.32 (br s, 1H, CONH<sub>2</sub>); 7.52 (br s, 1H, CONH<sub>2</sub>); 8.26 (s, 1H, H5).

#### Example 23

**Preparation of methyl 4-iodo-1-β-D-ribofuranosyl-pyrazole-3-carboxylate 5'-O-monophosphate disodium salt (23) and 4-iodo-1-β-D-ribofuranosyl-pyrazole-3-carboxamide 5'-O-monophosphate disodium salt (24).** The deprotected nucleosides 2 or 22 were added (0.271 mmol) to a mixture of freshly distilled phosphoryl chloride (217 mL, 2.38 mmol), water (27 mL, 1.52 mmol), pyridine (210 mL, 2.6 mmol) and acetonitrile (300 mL, 5.5 mmol). The mixture was maintained at 0 °C for 4 h under vigorous stirring, poured into ice water, further stirred for 1 h at 5 °C and then stored overnight at 5 °C. TLC (isopropanol/H<sub>2</sub>O/ NH<sub>4</sub>OH, 11/ 2/ 7) showed complete transformation of nucleosides to nucleotides. Aqueous solvent was evaporated under vacuum at 40 °C; the crude material was eluted through a column of anionic exchange resin Sephadex-DEAE, A-25 using a linear gradient of ammonium formate buffer as eluent (0.25 to 0.8 M, pH 7.4), purified by HPLC and finally

filtered through a short column of cationic exchange resin Dowex 50Wx2-200, Na<sup>+</sup> form, to give the disodium salt of the desired nucleotides after liophylisation.

23: white solid, mp 162-164° C, yield 40%. UV (H<sub>2</sub>O) nm l<sub>max</sub> 258 (ε 2800); l<sub>min</sub> 245 (ε 2500); <sup>1</sup>H NMR, (DMSO-d<sub>6</sub> + D<sub>2</sub>O) δ 3.78 (s, 3H, OMe); 3.74-4.36 (m, 5H, H5',5'', H4', H3' and H2'); 5.63 (d, 1H, J = 5.2 Hz, H1'); 8.36 (s, 1H, H5). <sup>31</sup>P NMR, (DMSO-d<sub>6</sub> + D<sub>2</sub>O) δ 0.17. FAB MS (>0, G-T) m/e 509 (M+H)<sup>+</sup>.

24: white solid, mp XX °C, yield 63%. UV (H<sub>2</sub>O) nm l<sub>max</sub> 258 (ε 2800); l<sub>shoulder</sub> 245; <sup>1</sup>H NMR, (DMSO-d<sub>6</sub>) δ 3.75 (m, 2H, H5',5''); 4.00 (m, 1H, H4'); 4.24-4.50 (m, 4H, H3', H2', OH2' and OH3'); 5.62 (d, 1H, J = 4.9 Hz, H1'); 7.22 (br s, 1H, CONH<sub>2</sub>); 7.72 (br s, 1H, CONH<sub>2</sub>); 8.22 (s, 1H, H5). <sup>31</sup>P NMR, (DMSO-d<sub>6</sub> + D<sub>2</sub>O) δ 1.7. FAB MS (>0, G-T) m/e 494 (M+H)<sup>+</sup>.

#### Example 24

Preparation of methyl 4-iodo-1-β-D-ribofuranosyl-pyrazole-3-carboxylate-5'-yl bis[(pivaloyloxy)methyl] phosphate (25) and 4-iodo-1-β-D-ribofuranosyl-pyrazole-3-carboxamide-5'-yl bis[(pivaloyloxy)methyl] phosphate (26). Bis[(pivaloyloxy)methyl] hydrogen phosphate (0.49 g, 1.5 mmol), compound 2 or 22 (1 mmol), and triphenylphosphine (0.39 g, 1.5 mmol) were dissolved in dimethylacetamide (5 mL). A solution of diethyl azodicarboxylate (0.26 g, 1.5 mmol) in dimethylacetamide (3 mL) was slowly dropped with stirring, and the reaction mixture was heated at 60 °C for 5 days under an argon atmosphere. The dimethylacetamide was evaporated under reduced pressure. Toluene (25 mL) was added and the solution was again evaporated. This procedure was repeated twice. The crude material were maintained under high vacuum for 24 h to remove residual dimethylacetamide. The remaining product was chromatographed on a column silica using CH<sub>2</sub>Cl<sub>2</sub>/MeOH (9.5/0.5) as eluent. The compound was isolated as colorless compound.

25: oil, yield 57 %.

26: oil, yield 52 %.

#### Example 25

Preparation of methyl 4-iodo-1-(β-D-2',3'-O-isopropylidene-ribofuranosyl)-pyrazole-3-carboxylate (27) and 4-iodo-1-(β-D-2',3'-O-isopropylidene-ribofuranosyl)-pyrazole-3-carboxamide (28). 2,2-dimethoxypropane (0.71 mL, 5.8 mmol) and bis-(p-nitrophenyl)-phosphate (30 mg, 0.09 mmol) were added to a solution of 2 or 22 (1 mmol) in anhydrous acetone (10 mL) and the mixture was let to stir at room temperature. 3 h

later, an aqueous solution of  $\text{NH}_4\text{HCO}_3$  0.25 M (50 mL) was added at 0 °C, the solvent was evaporated under reduced pressure and the crude material was purified by flash chromatography (Hexane/AcOEt, 7/3 in presence of some drop of triethylamine).

27: pale yellow oil, yield 68%;  $^1\text{H}$  NMR, ( $\text{CDCl}_3$ )  $\delta$  1.35 (s, 3H,  $\text{CH}_3$ ); 1.58 (s, 3H,  $\text{CH}_3$ );  
5 3.75 (m, 2H,  $\text{H}_5', 5''$ ); 3.93 (m, 4H, OMe and  $\text{H}_4'$ ); 4.55 (br s, 1H, OH); 5.07 (m, 2H,  $\text{H}_2'$  and  $\text{H}_3'$ ); 5.86 (d, 1H,  $J = 2.2$  Hz,  $\text{H}_1'$ ); 7.74 (s, 1H, H5).

28: pale yellow oil, yield 60%.

#### Example 26

Preparation of methyl 4-iodo-1-(b-D-2',3'-O-isopropylidene-ribofuranosyl)-  
10 pyrazole-3-carboxylate-5'yl bis(S-pivaloyl-2-thioethyl) phosphate (29) and 4-iodo-1-(b-D-2',3'-O-isopropylidene-ribofuranosyl)-pyrazole-3-carboxamide-5'-yl bis(S-pivaloyl-2-thioethyl) phosphate (30). 1H-tetrazole (0.21 g, 3.0 mmol) was added to a stirred solution of the protected derivatives 27 or 28 (1.0 mmol) and the bis(S-pivaloyl-2-ethioethyl) N,N-diisopropylphosphoramidite (1.2 mmol) in anhydrous THF (2 mL) at room temperature.  
15 After 30 min, the reaction mixture was cooled at -40° C, a solution of tert-butyl-hydroperoxide (1.3 mmol) in dichloromethane was added and then the mixture was allowed to warm to room temperature over 1 h. Sodium sulfite (10% solution, 1.3 mL) was added to destroy the excess t-butyl-hydroperoxide, the organic layer was separated and the aqueous layer was washed with dichloromethane (2 x 10 mL). The combined organic layers were first  
20 washed with saturated aqueous sodium hydrogen carbonate (5 mL) and then with water (3 x 5 mL), dried over sodium sulfate, filtered, and evaporated to dryness under reduced pressure. Column chromatography of the residue on silica gel afforded the title compounds as pale yellow oils.

29: pale yellow syrup, yield 43%;  $^1\text{H}$  NMR, ( $\text{CDCl}_3$ )  $\delta$  1.22 (s, 18H, 2 x t-Bu); 1.36 (s, 3H,  $\text{CH}_3$ ); 1.66 (s, 3H,  $\text{CH}_3$ ); 3.07-3.16 (m, 4H, 2 x  $\text{CH}_2\text{S}$ ); 3.93 (m, 3H, OMe); 4.01-4.14 (m, 6H, 2 x  $\text{CH}_2\text{O}$ ,  $\text{H}_5', 5''$ ); 4.50 (m, 1H,  $\text{H}_4'$ ); 4.95 (m, 1H,  $\text{H}_3'$ ); 5.26 (m, 1H,  $\text{H}_2'$ ); 5.96 (d, 1H,  $J = 1.3$  Hz,  $\text{H}_1'$ ); 7.81 (s, 1H, H5).  $^{31}\text{P}$ , ( $\text{CDCl}_3$ )  $\delta$  -1.23.

30: colourless syrup, yield 45%;  $^1\text{H}$  NMR, ( $\text{CDCl}_3$ )  $\delta$  1.22 and 1.23 (s, 18H, 2 x t-Bu); 1.37 (s, 3H,  $\text{CH}_3$ ); 1.57 (s, 3H,  $\text{CH}_3$ ); 3.08 and 3.14 (t, 4H,  $J = 6.8$  Hz, 2 x  $\text{CH}_2\text{S}$ ); 3.96-4.40 (m, 6H, 2 x  $\text{CH}_2\text{O}$ ,  $\text{H}_5', 5''$ ); 4.50 (m, 1H,  $\text{H}_4'$ ); 5.08 (m, 1H,  $\text{H}_3'$ ); 5.18 (m, 1H,  $\text{H}_2'$ ); 5.55 (sbr, 1H,  $\text{NH}_2$ ); 5.92 (d, 1H,  $J = 1.0$  Hz,  $\text{H}_1'$ ); 7.50 (sbr, 1H,  $\text{NH}_2$ ); 7.71 (s, 1H, H5).  $^{31}\text{P}$ , ( $\text{CDCl}_3$ )  $\delta$  -0.75.

Example 27

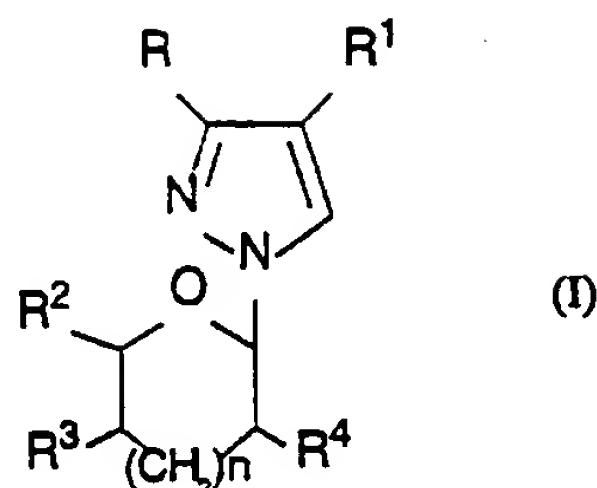

Preparation of methyl 4-iodo-1- $\beta$ -D-ribofuranosyl-pyrazole-3-carboxylate-5'yl bis(S-pivaloyl-2-thioethyl) phosphate (31) and 4-iodo-1- $\beta$ -D-ribofuranosyl-pyrazole-3-carboxamide-5'yl bis(S-pivaloyl-2-thioethyl) phosphate (32). Protected derivatives 29 and 30 (0.05 mmol) were dissolved in methanol (5 mL) and TsOH (38 mg, 0.2 mmol) was added. The mixture was let to stirr overnight at 60° C. TLC (CH<sub>2</sub>Cl<sub>2</sub>:MeOH/9.5:0.5) showed complete reaction. After purification on column chromatography (eluent 4% methanol in CH<sub>2</sub>Cl<sub>2</sub>) the expected products were recovered.

31: colourless syrup, yield 94%; <sup>1</sup>H NMR, (CDCl<sub>3</sub>)  $\delta$  1.21 and 1.23 (s, 18H, 2 x t-Bu); 2.02 (sbr, 2H, 2 x OH); 3.09–3.17 (m, 4H, 2 x CH<sub>2</sub>S); 3.93 (m, 3H, OMe); 4.05–4.17 (m, 4H, 2 x CH<sub>2</sub>O); 4.29–4.36 (m, 3H, H4', H5', 5''); 4.40–4.54 (m, 2H, H2', H3'); 5.88 (d, 1H, J = 2.2 Hz, H1'); 7.88 (s, 1H, H5). <sup>31</sup>P, (CDCl<sub>3</sub>)  $\delta$  -1.02.

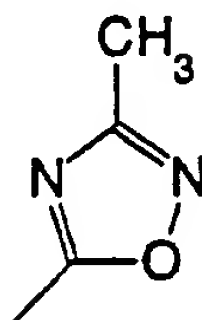

30: white foam, yield 80%; <sup>1</sup>H NMR, (CDCl<sub>3</sub>)  $\delta$  1.21 and 1.23 (s, 18H, 2 x t-Bu); 1.96 (sbr, 1H, OH); 3.04 and 3.13 (t, 4H, J = 6.8 Hz, 2 x CH<sub>2</sub>S); 3.48 (sbr, 1H, OH); 4.00 and 4.14 (q, 4H, J = 7 Hz, 2 x CH<sub>2</sub>O); 4.20–4.28 (m, 2H, H5', 5''); 4.48–4.58 (m, 3H, H2'', H3', H4'); 5.77 (d, 1H, J = 2.4 Hz, H1'); 5.92 (sbr, 1H, NH<sub>2</sub>); 7.39 (sbr, 1H, NH<sub>2</sub>); 7.74 (s, 1H, H5). <sup>31</sup>P, (CDCl<sub>3</sub>)  $\delta$  -1.43.

CLAIMS

- 1 1. Compounds of general formula (I)

- 2 wherein R is COOH, COOR',

- 3 and R' is a C<sub>1</sub> - C<sub>5</sub> alkyl radical
- 4 R<sup>1</sup> is I, Br, Cl, F, CF<sub>3</sub>, CN, SCN, CHO, CH=CH<sub>2</sub>, CH=CH Br, C≡C-Si (CH<sub>3</sub>)<sub>3</sub>,
- 5 CH=CH COOCH<sub>2</sub>CH<sub>3</sub>, C≡CH, CH<sub>2</sub>=CH NO<sub>2</sub>,
- 6 n is 0 or 1,
- 7 R<sup>2</sup> is H, CH<sub>2</sub>OH, CH<sub>2</sub> OCOPh, CH<sub>2</sub>O Si(CH<sub>3</sub>)<sub>2</sub>C(CH<sub>3</sub>)<sub>3</sub>, CH<sub>2</sub>OPO<sub>3</sub> Na<sub>2</sub>, CH<sub>2</sub>OPO[OCH<sub>2</sub>O-
- 8 COC(CH<sub>3</sub>)<sub>3</sub>]<sub>2</sub>, CH<sub>2</sub>OPO[O CH<sub>2</sub> CH<sub>2</sub> SCOC(CH<sub>3</sub>)<sub>3</sub>]<sub>2</sub>,
- 9 R<sup>3</sup> and R<sup>4</sup> equal or different from each other are H, OH, CH<sub>2</sub> OCOPh, CH<sub>2</sub>O Si(CH<sub>3</sub>)<sub>2</sub>C(CH<sub>3</sub>)<sub>3</sub>,
- 10 or they form together an isopropylidene group,
- 11 provided that when R<sup>2</sup> = R<sup>3</sup> = R<sup>4</sup> = H, n is always 1.
- 12 and with the exclusion of the compound having R=COOCH<sub>3</sub>, R<sup>1</sup>=I, n=0, R<sup>3</sup>=CH<sub>2</sub> OCOPh,
- 13 R<sup>3</sup>=R<sup>4</sup>=OCOPh
- 1 2. The compound as claimed in claim 1 selected from the group consisting of:
- 2 - compound of formula (I) wherein R = COOCH<sub>3</sub>, R<sup>1</sup> = I, n = 0, R<sup>2</sup> = CH<sub>2</sub>OH, R<sup>3</sup> = R<sup>4</sup> = OH,
- 3 - compound of formula (I) wherein R = COOCH<sub>3</sub>, R<sup>1</sup> = C≡C-Si (CH<sub>3</sub>)<sub>3</sub>, n = 0, R<sup>2</sup> =
- 4 CH<sub>2</sub>OCOPh, R<sup>3</sup> = R<sup>4</sup> = OCOPh,
- 5 - compound of formula (I) wherein R = COOCH<sub>2</sub>CH<sub>3</sub>, R<sup>1</sup> = CHO, n=0, R<sup>2</sup> = CH<sub>2</sub>OCOPh, R<sup>3</sup>
- 6 = R<sup>4</sup> = OCOPh,

- 7 - compound of formula (I) wherein  $R = \text{COOCH}_2\text{CH}_3$ ,  $R^1 = \text{CH}=\text{CH COOCH}_2\text{CH}_3$ ,  $n = 0$ ,  $R^2$   
8  $= \text{CH}_2\text{OCOPh}$ ,  $R^3 = R^4 = \text{OCOPh}$ ,
- 9 - compound of formula (I) wherein  $R = \text{COOCH}_2\text{CH}_3$ ,  $R^1 = \text{CH}_2=\text{CH}$ ,  $n = 0$ ,  $R^2 = \text{CH}_2\text{OCOPh}$ ,  
10  $R^3 = R^4 = \text{OCOPh}$ ,
- 11 - compound of formula (I) wherein  $R = \text{COOCH}_2\text{CH}_3$ ,  $R^1 = \text{CH}=\text{CHBr}$ ,  $n = 0$ ,  $R^2 =$   
12  $\text{CH}_2\text{OCOPh}$ ,  $R^3 = R^4 = \text{OCOPh}$ ,
- 13 - compound of formula (I) wherein  $R = \text{COOCH}_2\text{CH}_3$ ,  $R^1 = \text{CH}=\text{CHNO}_2$ ,  $n = 0$ ,  $R^2 =$   
14  $\text{CH}_2\text{OCOPh}$ ,  $R^3 = R^4 = \text{OCOPh}$ ,
- 15 - compound of formula (I) wherein  $R = \text{COOCH}_2\text{CH}_3$ ,  $R^1 = \text{I}$ ,  $n = 1$ ,  $R^2 = R^3 = R^4 = \text{H}$ ,
- 16 - compound of formula (I) wherein  $R = \text{COOCH}_2\text{CH}_3$ ,  $R^1 = \text{CHO}$ ,  $n = 1$ ,  $R^2 = R^3 = R^4 = \text{H}$ ,
- 17 - compound of formula (I) wherein  $R = \text{COOCH}_2\text{CH}_3$ ,  $R^1 = \text{C}\equiv\text{C-Si}(\text{CH}_3)_3$ ,  $n = 1$ ,  $R^2 = R^3 =$   
18  $R^4 = \text{H}$ ,
- 19  $n = 1$ ,  $R^2 = R^3 = R^4 = \text{H}$ ,
- 20 - compound of formula (I) wherein  $R = \text{COOCH}_2\text{CH}_3$ ,  $R^1 = \text{C}\equiv\text{CH}$ ,  $n = 1$ ,  $R^2 = R^3 = R^4 = \text{H}$ ,
- 21 - compound of formula (I) wherein  $R = \text{COOCH}_2\text{CH}_3$ ,  $R^1 = \text{CH}=\text{CHNO}_2$ ,  $n = 1$ ,  $R^2 = R^3 = R^4$   
22  $= \text{H}$ ,
- 23 - compound of formula (I) wherein  $R = \text{COOCH}_2\text{CH}_3$ ,  $R^1 = \text{CH}=\text{CH COOCH}_2\text{CH}_3$ ,  $n = 1$ ,  $R^2$   
24  $= R^3 = R^4 = \text{H}$ ,
- 25 - compound of formula (I) wherein  $R = \text{COOCH}_2\text{CH}_3$ ,  $R^1 = \text{CH}_2=\text{CH}$ ,  $n = 1$ ,  $R^2 = R^3 = R^4 =$   
26  $\text{H}$ ,
- 27 - compound of formula (I) wherein  $R = \text{COOCH}_2\text{CH}_3$ ,  $R^1 = \text{CHBr}=\text{CH}$ ,  $n = 1$ ,  $R^2 = R^3 = R^4$   
28  $= \text{H}$ ,
- 29 - compound of formula (I) wherein  $R = 3\text{-methyl-1',2',4'-oxadiazol-5'yl}$ ,  $R^1 = \text{I}$ ,  $n = 0$ ,  $R^2$   
30  $= \text{CH}_2\text{OH}$ ,  $R^3 = R^4 = \text{OH}$ ,
- 31 - compound of formula (I) wherein  $R = \text{COOH}$ ,  $R^1 = \text{I}$ ,  $n = 0$ ,  $R^2 = \text{CH}_2\text{OH}$ ,  $R^3 = R^4 = \text{OH}$ ,
- 32 - compound of formula (I) wherein  $R = \text{COOCH}_3$ ,  $R^1 = \text{I}$ ,  $n = 0$ ,  
33  $R^2 = \text{CH}_2\text{O Si}(\text{CH}_3)_2\text{C}(\text{CH}_3)_3$ ,  $R^3 = R^4 = \text{O Si}(\text{CH}_3)_2\text{C}(\text{CH}_3)_3$
- 34 - compound of formula (I) wherein  $R = \text{COOCH}_2\text{CH}_2\text{CH}_2\text{CH}_3$ ,  $R^1 = \text{I}$ ,  $n = 0$ ,  $R^2 = \text{CH}_2\text{OH}$ ,  $R^3$   
35  $= R^4 = \text{OH}$ ,
- 36 - compound of formula (I) wherein  $R = \text{COOCH}_3$ ,  $R^1 = \text{I}$ ,  $n = 0$ ,  $R^2 = \text{CH}_2\text{OPO}_3 \text{Na}_2$ ,  
37  $R^3 = R^4 = \text{OH}$ ,
- 38 - compound of formula (I) wherein  $R = \text{COOCH}_3$ ,  $R^1 = \text{I}$ ,  $n = 0$ ,

39  $R^2 = CH_2OPO[OCH_2O-COC(CH_3)_3]_2$

40 - compound of formula (I) wherein  $R = COOCH_3$ ,  $R^1 = I$ ,  $n = 0$ ,  $R^2 = CH_2OH$ ,  $R^3$  and  $R^4$  form  
41 together an isopropylidene group,

42 - compound of formula (I) wherein  $R = COOCH_3$ ,  $R^1 = I$ ,  $n = 0$ ,

43  $R^2 = CH_2OPO[OCH_2CH_2SCOC(CH_3)_3]_2$ ,  $R^3$  and  $R^4$  form together an isopropylidene chain,

44 - compound of formula (I) wherein  $R = COOCH_3$ ,  $R^1 = I$ ,  $n = 0$ ,  $R^2 = CH_2OPO[OCH_2CH_2$   
45  $SCOC(CH_3)_3]_2$ ,  $R^3 = R^4 = OH$ .

1 3. A therapeutical composition containing as the active principle at least one compound as  
2 claimed in anyone of claims 1 and 2, in combination with suitable excipients or diluents.

1 4. The therapeutical composition according to claim 3 for the treatment of solid and liquid  
2 tumours.

1 5. The therapeutical composition according to claim 4 wherein said solid tumours are selected  
2 from the group consisting of : carcinoma, neuroblastoma, adenocarcinoma, and said liquid  
3 tumours are selected from the group consisting of leukemia and lymphoma.

1 6. The therapeutical composition according to anyone of claims 4 and 5 containing as the  
2 active principle the compound of formula (I) wherein  $R = COOCH_3$ ,  $R^1 = I$ ,  $n = 0$ ,  $R^2 =$   
3  $CH_2OH$ ,  $R^3 = R^4 = OH$ .

1 7. The therapeutical composition according to anyone of claims 4 and 5 containing as the  
2 active principle at least one active ingredient selected from the group consisting of :

3 - compound of formula (I) wherein  $R = COOCH_2CH_3$ ,  $R^1 = CH=CHNO_2$ ,  $n = 1$ ,  $R^2 = R^3 = R^4$   
4  $= H$ ,

5 - compound of formula (I) wherein  $R = COOCH_2CH_3$ ,  $R^1 = CH=CHBr$ ,  $n = 1$ ,  $R^2 = R^3 = R^4$   
6  $= H$ ,

1 8. The therapeutical composition according to anyone of claims 4-8 further containing other  
2 antitumoral agents.

1 9. The therapeutical composition according to claim 8 wherein said antitumoral agents are  
2 selected from the group consisting of tiazofurin, selenazofurin, ribavirin, 6-mercaptopurin,  
3 methothrexate, 5-fluorouracyl, 6-thioguanine and taxol.

1 10. The therapeutical composition according to claim 3 further containing as the active  
2 ingredient an antiviral agent.

1 11. The therapeutical composition according to claim 10, wherein said antiviral agents are  
2 selected from the group consisting of 2',3'-dideoxy-inosine and 2',3'-dideoxy-adenosine

3 9-[2(phosphono-methoxy)ethyl]-adenine, 9-[2(phosphono-methoxy)propyl]-guanine,  
 4 9-[2(phosphono-methoxy)propyl]-adenine for the treatment of HIV1 infections.

1 12. The therapeutical composition according to claim 11 for the treatment of AIDS related  
 2 neoplasias

1 13. The therapeutical compositions according to claim 10 wherein said antiviral agents are  
 2 selected from the group consisting of acyclovir, 9-[2(phosphono-methoxy)ethyl]-guanine  
 3 and adenine-arabinoside.

1 14. A process for preparing the compound as claimed in claim in anyone of claims 1 or 2  
 2 wherein  $R = \text{COOR}'$ ,  $\text{COOH}$ ,  $R^1$  is  $= \text{I}$ ,  $R^2 = \text{CH}_2\text{OH}$ ,  $\text{CH}_2\text{OPO}_3\text{Na}_2$ ,  
 3  $\text{CH}_2\text{OPO}[\text{OCH}_2\text{OCOC}(\text{CH}_3)_3]_2$  or  $\text{CH}_2\text{OPO}[\text{OCH}_2\text{CH}_2\text{SCOC}(\text{CH}_3)_3]_2$ ,  $R^3 = R^4 = \text{OH}$  and  
 4  $n=0$ ,

5 comprising the following steps:

6 a) reacting the intermediate of formula (I) wherein  $R$ ,  $R^1$  and  $n$  have the above mentioned  
 7 meanings and  $R^2 = \text{CH}_2\text{-OCOPh}$ ,  $R^3 = R^4 = \text{OCOPh}$ , with sodium methylate in the presence  
 8 of methanol as the solvent, thereby obtaining the compound of formula (I) wherein  $R =$   
 9  $\text{COOCH}_3$ ,  $R^1 = \text{I}$ ,  $R^2 = \text{CH}_2\text{OH}$ ,  $R^3 = R^4 = \text{OH}$  and  $n = 0$ ,

10 b) reacting the compound obtained in step (a) with an aqueous solution of sodium hydroxide  
 11 thereby obtaining the compound of formula (I) having  $R = \text{COOH}$ ,  $R^1 = \text{I}$ ,  $R^2 = \text{CH}_2\text{OH}$ ,  $R^3 =$   
 12  $R^4 = \text{OH}$  and  $n = 0$ .

13 or

14 b') reacting the compound of formula (I) obtained in step (a), with  
 15 tertbutyldimethylsilylchloride in dimethylformamide thereby obtaining the compound of  
 16 formula (I) wherein  $R = \text{COOCH}_3$ ,  $R^1 = \text{I}$ ,  $R^2 = \text{CH}_2\text{OSi}(\text{CH}_3)_2\text{C}(\text{CH}_3)_3$ ,  $R^3 = R^4 =$   
 17  $\text{OSi}(\text{CH}_3)_2\text{C}(\text{CH}_3)_3$ , which compound is then treated with the alcohol  $R''\text{OH}$ , wherein  $R''$  is a  
 18  $\text{C}_2\text{-C}_5$  alkyl radical in the presence of sodium hydride in benzene, thereby obtaining the  
 19 compound of formula (I), wherein  $R$  is  $\text{COOR}''$ ,  $R^1 = \text{I}$ ,  $R^2 = \text{CH}_2\text{OSi}(\text{CH}_3)_2\text{C}(\text{CH}_3)_3$ , which  
 20 compound is finally converted into the product of formula (I) wherein  $R = \text{COOR}''$ ,  $R^1 = \text{I}$ ,  $R^2$   
 21  $= \text{CH}_2\text{OH}$ ,  $R^3 = R^4 = \text{OH}$  and  $n = 0$ , with ammonium fluoride in methanol,

22 or

23 b'') reacting the compound of formula (I) obtained in step (a) with  $\text{POCl}_3$  and pyridine in a  
 24 mixture of acetonitrile and water successively salifying the obtained product with cationic

25 exchange resins, thereby obtaining the compound of formula (I) wherein  $R = \text{COOCH}_3$ ,  $R^1 =$   
 26 I,  $R^2 = \text{CH}_2\text{OPO}_3\text{Na}_2$ ,  $R^3 = R^4 = \text{OH}$  and  $n = 0$ ,

27 or

28 b''') reacting the compound of formula (I) obtained in step (a) with bis[(pivaloyloxy)methyl]  
 29 hydrogen monophosphate in the presence of triphenylphosphine and diethyl azodicarboxylate  
 30 in dimethylacetamide as the solvent, thereby obtaining the compound of formula (I) wherein  
 31  $R = \text{COOCH}_3$ ,  $R^1 = \text{I}$ ,  $R^2 = \text{CH}_2\text{OPO}[\text{OCH}_2\text{OCOC}(\text{CH}_3)_3]_2$ ,  $R^3 = R^4 = \text{OH}$  and  $n = 0$

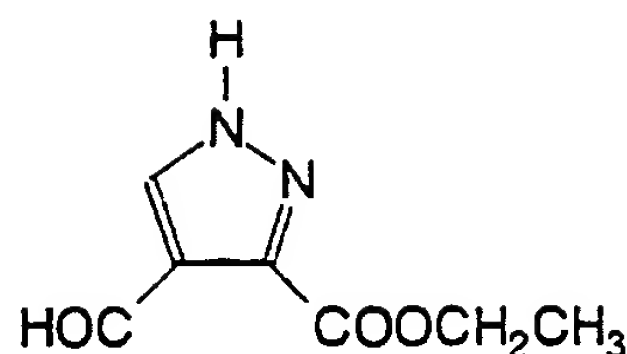

32 or

33 b'iv) reacting the compound of formula (I) obtained in step (a) with 2,2 dimethoxypropane in  
 34 the presence of bis-(p-nitro-phenyl)-phosphate in acetone thereby obtaining the compound  
 35 of formula (I), wherein  $R = \text{COOCH}_3$ ,  $R^1 = \text{I}$ ,  $R^2 = \text{CH}_2\text{OH}$ ,  $R^3$  and  $R^4$  form an  
 36 isopropylidene group and  $n = 0$ , which compound is then reacted with bis (S-pivaloyl-2-  
 37 thioethyl)N,N-diisopropyl-phosphoramidite in tetrahydrofuran in the presence of 1-H  
 38 tetrazole at room temperature and successively with tertbutylhydroperoxide, thereby obtaining  
 39 the compound of formula (I) wherein  $R = \text{COOCH}_3$ ,  $R^1 = \text{I}$ ,  $R^2 =$   
 40  $\text{CH}_2\text{OPO}[\text{OCH}_2\text{CH}_2\text{SCOC}(\text{CH}_3)_3]_2$ ,  $R^3$  and  $R^4$  form an isopropylidene group and  $n = 0$ ,  
 41 which compound is finally treated with p-toluesulfonic acid in methanol thereby obtaining  
 42 the compound of formula (I) wherein  $R = \text{COOCH}_3$ ,  $R^1 = \text{I}$ ,  $R^2 =$   
 43  $\text{CH}_2\text{OPO}[\text{OCH}_2\text{CH}_2\text{SCOC}(\text{CH}_3)_3]_2$ ,  $R^3 = R^4 = \text{OH}$  and  $n = 0$ .

1 15. The process as claimed in 14 wherein in step (b) NaOH 0.035 M is used, in step (b''') the  
 2 reaction temperature is 60° C.

1 16. The process for preparing the compounds as claimed in any one of claims 1 or 2 wherein R  
 2 is  $\text{COOCH}_3$ ,  $R^1 = \text{C}\equiv\text{CSi}(\text{CH}_3)_3$ ,  $R^2 = \text{CH}_2\text{-OCOPh}$ ,  $R^3 = R^4 = \text{OCOPh}$  and  $n = 0$ ,  
 3 comprising reacting the compound of formula (I) wherein  $R^1 = \text{I}$ ,  $R^2$ ,  $R^3$  and  $R^4$  have the  
 4 above mentioned meanings with trimethylsilylacetylene with a catalytic amount of  
 5 bis(triphenylphosphine) palladium dichloride and CuI in triethylamine at a temperature  
 6 ranging from 60 to 80°C.

1 17. A process for preparing the compound as claimed in any one of claims 1 and 2, having  $R =$   
 2  $\text{COOCH}_2\text{CH}_3$ ,  $R^1$  is  $=\text{CHO}$ ,  $\text{CH=CHNO}_2$ ,  $\text{CH=CHBr}$ ,  $\text{CH=CH}_2$ ,  $\text{CH=CHCOOCH}_2\text{CH}_3$ ,  $R^2$   
 3  $=\text{CH}_2\text{OCOPh}$ ,  $R^3 = R^4$ ,  $\text{OCOPh}$ ,  $n=0$  comprising reacting the 4-formyl-3-ethoxycarbonyl  
 4 pyrazole having the formula:

5 with hexamethyldisilazane with 1-O-acetyl-2,3,5-tri-O-benzoyl- $\beta$ -D-ribofuranose in the  
 6 presence of trimethylsilylchloride and trifluoromethanesulfonate thereby obtaining the  
 7 compound of formula (I) wherein R is  $\text{COOCH}_2\text{CH}_3$ ,  $\text{R}^1$  is  $=\text{CHO}$ ,  $\text{R}^2 = \text{CH}_2\text{OCOPh}$ ,  $\text{R}^3$  and  
 8  $\text{R}^4$  are  $\text{OCOPh}$ ,

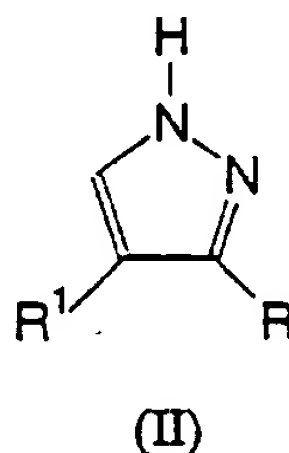

9 b) reacting the compound of formula (I) obtained in step (a) with nitromethane and aluminum  
 10 oxide thereby obtaining the compound of formula (I) wherein R,  $\text{R}^2$ ,  $\text{R}^3$ ,  $\text{R}^4$  and n have the  
 11 above mentioned meanings and  $\text{R}^1$  is  $\text{CHOH-CHNO}_2$ , which compound is in turn converted  
 12 into the compound of formula (I) having  $\text{R}^1 = \text{CH=CHNO}_2$  with mesyl chloride;

13 or

14 b') reacting the compound of formula (I) obtained in step (a) with a compound selected from  
 15 the group consisting of:  $\text{Ph}_3\text{P=CHCOOCH}_2\text{CH}_3$  and  $\text{Ph}_3\text{PCH}_2\text{Y Br}$ , wherein Y is H or Br  
 16 thereby obtaining the compound of formula (I) wherein R,  $\text{R}^2$ ,  $\text{R}^3$ ,  $\text{R}^4$  and n have the same  
 17 meanings and  $\text{R}^1$  is respectively  $\text{CH=CHCOOCH}_2\text{CH}_3$ ,  $\text{CH=CHY}$ , wherein Y has the above  
 18 mentioned meanings.

1 18. The process as claimed in claim 17 wherein, step (b') is carried out in the presence of n-  
 2 butyllithium when  $\text{Ph}_3\text{PCH}_2\text{Y Br}$  is used as the reactant.

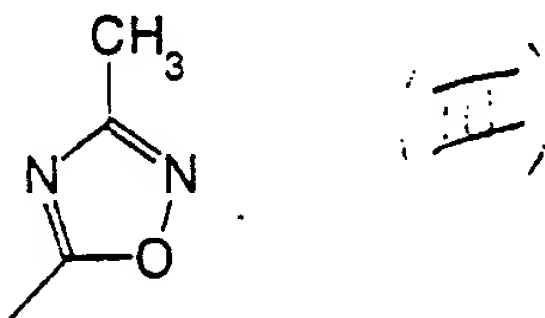

1 19. A process for preparing the compounds as claimed in any one of claims 1 and 2 wherein R  
 2 is  $\text{COOCH}_2\text{CH}_3$ ,  $\text{R}^1$  is  $\text{CHO}$ ,  $-\text{C}\equiv\text{C-Si}(\text{CH}_3)_3$ ,  $-\text{C}\equiv\text{CH}$ ,  $\text{CHO}$ ,  $\text{CH=CHNO}_2$ ,  $\text{CH=CHBr}$ ,  
 3  $\text{CH=CH}_2$ ,  $\text{CH=CHCOO}_2\text{CH}_3$ ,  $\text{R}^2 = \text{R}^3 = \text{R}^4 = \text{H}$ ,  $n=1$ , comprising the following steps:  
 4 reacting the compound of formula (II)

5 wherein  $R^1$  is I, CHO with 2,3 dihydro-4-pyran in chloroform in the presence of  
 6 paratoluensulphonic acid, thereby obtaining the compound of formula (I), wherein  $R^1$  is I or  
 7 CHO,  $R$ ,  $R^2$ ,  $R^3$  and  $R^4$  have the above mentioned meanings,  
 8 b) reacting the compound of formula (I) obtained in step (a) having  $R^1 = I$ , with  
 9 trimethylsilylacetylene in the presence of bis(triphenylphosphine)palladium dichloride and CuI  
 10 in triethylamine at temperatures ranging from 60 to 80°C, thereby obtaining the compound of  
 11 formula (I) having  $R^1 = C \equiv C-Si(CH_3)_3$ , which compound is optionally treated with  
 12 tetrabutylammoniumfluoride in tetrahydrofuran thereby obtaining the compound of formula (I)  
 13 having  $R^1 = C \equiv CH$ ,  
 14 or  
 15 b') reacting the compound of formula (I) obtained in step (a) having  $R^1 = CHO$  with  
 16 nitromethane and aluminum oxide thereby obtaining the compound of formula (I) wherein  $R$ ,  
 17  $R^2$ ,  $R^3$ ,  $R^4$  and  $n$  have the above mentioned meanings and  $R^1$  is  $CHOH-CHNO_2$ , which  
 18 compound is in turn converted into the compound of formula (I) having  $R^1 = CH=CHNO_2$   
 19 with mesyl chloride,  
 20 or  
 21 b'') reacting the compound of formula (I) obtained in step (a) having  $R^1 = CHO$  with a  
 22 compound selected from the group consisting of:  $Ph_3P=CHCOOCH_2CH_3$  and  $Ph_3PCH_2Y$   
 23 Br, wherein  $Y$  is H or Br thereby obtaining the compound of formula (I) wherein  $R$ ,  $R^2$ ,  $R^3$ ,  
 24  $R^4$  and  $n$  have the same meanings and  $R^1$  is respectively  $CH=CHCOOCH_2CH_3$ ,  $CH=CHY$ .  
 25 wherein  $Y$  has the above mentioned meanings.

1 20. A process as claimed in claim 19 wherein, step (b') is  
 2 carried out in the presence of  $n$ -butyllithium when  $Ph_3PCH_2Y$  Br is used as the reactant.

1 21. A process for preparing the compound as claimed in anyone of claims 1 and 2, for  
 2 preparing the compound wherein  $R$  is:

3  $R^1$  is I,  $R^2 = CH_2OH$ ,  $R^3 = R^4 = OH$ ,

4 comprising reacting the compound of formula (I) wherein  $R = \text{COOCH}_3$ ,  $R^1 = \text{I}$ ,  $n=0$   $R^2 =$   
5  $\text{CH}_2\text{-OCOPh}$ ,  $R^3 = R^4 = \text{OCOPh}$  and  $n=0$ , with acetamidoxime in the presence of NaH in  
6 tetrahydrofuran.

1 22. 4-formyl-3-ethoxy-carbonyl-pyrazole.

1 23. A process for preparing the compound as claimed in claim 23 comprising reacting  
2 ethylpyruvate semicarbazone with  $\text{POCl}_3$  in dimethylformamide.

## INTERNATIONAL SEARCH REPORT

International Application No  
PC., EP 96/02485A. CLASSIFICATION OF SUBJECT MATTER  
IPC 6 C07H19/04 A61K31/70

According to International Patent Classification (IPC) or to both national classification and IPC

## B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)  
IPC 6 C07H A61K

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)

## C. DOCUMENTS CONSIDERED TO BE RELEVANT

| Category * | Citation of document, with indication, where appropriate, of the relevant passages   | Relevant to claim No. |
|------------|--|-----------------------|
| X          | JOURNAL OF MEDICINAL CHEMISTRY,<br>vol. 35, 1992, WASHINGTON US,<br>pages 917-924, XP002018485<br>MANFREDINI S. ET AL: "Pyrazole-Related<br>Nucleosides. Synthesis and<br>Antiviral/Antitumor Activity of Some<br>Substituted Pyrazole and<br>Pyrazolo[4,3-d]-1,2,3-triazin-4-one<br>Nucleosides"<br>cited in the application<br>see the whole document<br>----- | 1-3,14                |

☐ Further documents are listed in the continuation of box C.☐ Patent family members are listed in annex.

## \* Special categories of cited documents:

- "A" document defining the general state of the art which is not considered to be of particular relevance
- "E" earlier document but published on or after the international filing date
- "L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- "O" document referring to an oral disclosure, use, exhibition or other means
- "P" document published prior to the international filing date but later than the priority date claimed

- "T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- "X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- "Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
- "&" document member of the same patent family

Date of the actual completion of the international search

14 November 1996

Date of mailing of the international search report
